

2021 BUYERS GUIDE

ALLIANCE TIRE GROUP (ATG)

Radial Construction Tires and More

After more than 50 years, modern contractors know that they can count on Alliance Tire Group (ATG), a group company of Yokohama, for performance, low cost of ownership, and innovation.

And now, ATG has built on those to make it easier than ever to step up to the latest innovation in construction tires—radials—by pricing high-performance radial tires at the same level as most competitors' bias-ply tires.

RADIAL PERFORMANCE

Radial tires boost the performance of construction equipment. Their long, even footprint puts more

horsepower on the ground, delivers greater traction, and improves fuel economy. Steel-belted construction keeps tires running cooler for longer service life and resists punctures. Flexible radial sidewalls reduce jolts and vibration, so they're easier on operators and machinery. And radials last longer than bias-ply tires do—as much as two to three times longer.

ATG's skilled crews, working in state-of-the-art factories, manufacture a broad line of radial tires for backhoes, loaders, dump trucks, and skid steers so efficiently that they can compete with other manufacturers' bias-ply tires. The bottom line: better performance and lower cost per hour.

RADIAL CHOICES

ATG delivers a wide range of radial tires for construction machinery.

The Galaxy Multi Tough is a great introduction to radials. Priced to compete head-to-head with bias-ply options, the Galaxy Multi Tough features radial construction and an innovative block tread pattern for outstanding longevity and performance on mixed surfaces.

The steel-belted Alliance 580 radial uses a classic "hockey stick" bar lug design for the loose soils that backhoe, loader and utility tractor operators often find themselves in ... boosted by the added traction that radials deliver.

The Alliance 585 combines steel-belted radial construction with a unique, non-directional hybrid block tread design optimized for both traction and self-

cleaning. The result is a long-lasting tire for backhoes, loaders, and telehandlers that can handle any surface—and any direction—with a sure grip and wear resistance.

The Alliance 550 Multi Use radial is a four-season heavy hitter, with more biting edges in its hybrid, curved block tread pattern and outstanding performance in snow as well as loose soil, mud, and even pavement. On backhoes, loaders, wheeled excavators, tractors, and skid steers, the steel-belted Alliance 550 takes equipment to the next level.

MORE OPTIONS

With more than 2,000 SKUs under the Alliance, Galaxy, and Primex brands, ATG manufactures more than just great radials. Bias-ply tires from ATG are purpose built for the real-world challenges of any jobsite, from snow and sand to hard rock mines and everything in between. And, the Galaxy Severe Duty Solid (SDS) line has built a global reputation for performance in some of the most punishing environments on earth.

Quality and performance have earned Alliance, Galaxy, and Primex tires the trust of some of the world's most popular machinery companies, including CNH, John Deere, AGCO, Caterpillar, and Bobcat, which include ATG brands as original equipment. And ATG's tires are widely used as replacement tires by contractors looking for better performance, longer service life, and lower total cost of ownership. ■

Contact your Alliance, Galaxy, or Primex tire dealer for more information, visit www.atgtire.com or call 800.343.3276.

ALLIANCE | GALAXY

Galaxy Multi Tough

RADIAL CONSTRUCTION. RADIAL PERFORMANCE.

Galaxy and Alliance radial tires bring more to the job site. More traction. More horsepower to the ground. More service life. They also bring less...as in less cost per hour, less slip and less fuel consumption.

Ask your tire dealer about Alliance and Galaxy radials, visit www.atgtire.com or call (800) 343-3276.

AMERICAN AUGERS

Since 1970, American Augers has specialized in designing and manufacturing the largest category of horizontal directional drills in the industry, in addition to a full range of auger-boring machines and efficient high-pressure cleaning systems. We take pride in being American-made and internationally distributed. Our machines are produced in our West Salem, Ohio, location and are built to be rugged, dependable, and long-lasting. This keeps our customers confident about their equipment and productive on the jobsite. The saying “built to last” is engrained in our culture, and it’s reflected in our entire fleet of equipment by working as hard as the people operating it.

UNDERGROUND CONSTRUCTION VETERAN

We know jobsites are not created equal, which is why we’ve worked closely with our customers over the last 50 years to engineer, build, and customize equipment that is best suited to their needs. Our engineers take pride in their work and are

as reliable as the machines they create. This is why we’ve led the way in several industry advancements.

For example, our electric auger-boring system provides an alternative to traditional diesel-powered machines, minimizing the amount of exhaust and diesel fumes blowing into the boring pit. In addition, the system is designed to boost operator efficiency without compromising power, using an electric motor that produces 600,000 lbs of thrust for a more consistent power output along a wider range of auger speeds.

We’ve also led the industry as the first HDD manufacturer to eliminate the chain carriage, instead utilizing a rack and pinion carriage design on our directional drills. This design provides smoother carriage movement, more precise operating control, and eliminates the need for complicated parts, which optimizes operator productivity. It’s also tough and rugged enough to withstand a variety of horizontal boring projects.

When all is said and done, our #1 goal is to provide reliable, durable, and long-

lasting machines that keep our customers up and running.

BEYOND THE EQUIPMENT

From the moment boots hit the ground to the finished project, our team is there to help our customers get the job done. We know every hour counts, which is why our customer relationships extend beyond the equipment. Whether it’s scheduled maintenance or a down machine, we are ready to provide 24/7 customer care, service, and support, to get contractors back to work quickly and efficiently.

As part of the Ditch Witch Organization, our machines are sold and serviced through the Ditch Witch worldwide dealership network. Our customers can expect to receive high-quality customer service from sales and service professionals who have gone through extensive product training and are always ready to help get them back to work quickly. ■

AUGERS®**

AMI ATTACHMENTS

Next Level Productivity Starts with Your Attachments

It's no surprise that operators hold a special place in their heart for the equipment they run. Along with the power of an excavator's breakout force or the smooth grading skills, the biggest impact on improving productivity is having the right tool for the job—and that means attachments.

With more than 250 products for excavators, compact excavators, wheel loaders, and more, AMI Attachments not only has the right tool for every job, its products are manufactured using Hardox® wear plate and Strenx™ performance steel.

MANY INDUSTRY FIRSTS

Serving the heavy equipment market across North America, AMI Attachments has created a product line that spans the full range from compact excavators to large-scale production mining machines. Within its 20 years of business, the company has achieved many industry firsts, including new product designs, product warranty, and the world's first dual member certification of both the Hardox® In My Body and My Inner Strenx™.

Walking through the engineering department at AMI Attachments, it's easy to see product development is

a top priority that never stops. Their dedicated team of engineers is constantly adding improvements and creating innovative new designs using the latest technology to maximize performance and minimize wear. The goal is to provide its customers with world-class material handling solutions.

ATTACHMENTS BUILT TO LAST

One of AMI Attachments' signature products is the Graptor® Integrated Thumb Bucket. This patented design is powered by a helical actuator. With incredible holding strength—up to 54,000 ft-lb of torque—you gain total control, whether picking, handling, or demolishing. Perfect for large objects or bucketfuls of debris, the Graptor keeps its grip throughout the entire rotation, making your job easier and faster. Taking the guesswork out of trying to control both bucket and thumb simultaneously, the Graptor lets you just clamp and roll.

For multi-tasking, the AMI Attachments Jawbone 4-in-1 Excavator Bucket is the ultimate in versatility. At first glance, the Jawbone looks no different than a regular digging bucket, but provides all the power of a hydraulic cylinder thumb, without custom installation.

Like the Graptor, the Jawbone Bucket is powered by a helical actuator, giving you up to 54,000 ft-lb of torque. The unique design reduces downtime by allowing you to switch effortlessly between digging, ditching, grading, and grabbing, with two different cutting edges in one.

The newest product just released is the AXXIS™ Tilt Rotator—powered by NOX. Featuring 360° endless rotation along with tilt angles of 50° in either direction, the AMI Attachments' AXXIS Tilt Rotator provides refined dexterity for precise grading, backfilling, and material handling. The tilting action is performed by a compact helical actuator which eliminates the need for bulky cylinders. The AMI Attachments AXXIS Tilt Rotator has shown that operators are able to work 25-30% faster.

QUALITY PRODUCTS

No matter the machine or the attachment, AMI Attachments stands behind its products with the industry-first 2-year limited warranty. For products that are designed for hard work in abrasive situations, the 2-year limited warranty is a great way to know you're buying a quality product that will last. ■

To get the right tools to take your productivity to the next level, you can contact AMI Attachments directly at 800.556.9452 and they will work with you and your local equipment dealer to get you what you need.

www.amiattachments.com

Graptor® Bucket

Graptor® Demolition Bucket

Graptor® Rake

COME TO GRIPS WITH GREATER PRODUCTIVITY

The AMI Attachments Graptor Bucket is the only integrated thumb bucket powered by a helical actuator, producing up to 54,000 foot-pounds of torque at 3000 PSI. Take the guesswork out of trying to control both thumb and bucket at the same time, and confidently handle heavy and awkward loads with superior grip that maintains constant throughout the bucket's entire rotation. The AMI Graptor Bucket is also available in Demolition and Rake models.

BIGFOOT CRANE COMPANY INC.

Bigfoot Crane Company Inc. is a value-driven organization. We strive to be a leader in the high-angle materials handling industry by providing the best in industrial cranes, hoists, underhook accessories, services, and solutions.

EXTENSIVE EXPERIENCE

With nearly 30 years of experience, we understand the challenges our customers face. We have developed our team, service, and product selection accordingly to ensure we can deliver meticulous quality and excellence every time.

Bigfoot has been operating out of Abbotsford, BC, since the early 2000's and a distribution warehouse in Virginia since 2015.

LEGENDARY SERVICE

As a growing company we pride ourselves on our culture, our customer

service, and our reputation. Our goal is to provide products and services that are industry leading and will keep clients coming back.

Our company moto is: Legendary Service and this moto lives in how each Bigfoot employee approaches their work and customer service.

One of our key strategies is to provide our customers with a turn-key and inclusive vertical material handling experience including but not limited to:

- Tower crane rentals, sales & services
- Construction hoist rentals, sales & services
- Under hook crane accessories rentals, sales & service
- Self dumping bins
- Auto leveling pallet forks
- Concrete buckets
- Man-baskets

- Spreader bars and related rigging
- Wind safety systems sales & service
- Zone control rentals, sales & service
- Complete shop services to support all products we rent and sell
- Certified Crane & Hoist operator training facility covering all classes of cranes and hoists
- In-house engineering and project support

SINGLE, GO-TO PARTNER

Our product and service line up if focused on giving each of our customers a single go-to partner that they can trust and depend on for their entire project, we literally can provide with one phone call the solution our customers need with out the need to talk to multiple suppliers. ■

SELF-DUMPING BINS A-D SERIES BY BOSCARO

Boscaro's A-D self-dumping bin series consists of 17 durable yet light weight sizes designed for safe, hands free unloading. Increase productivity while enhancing safety by equipping your worksite with a self-dumping bin. All of our buckets and bins are approved for use in North America because they meet or exceed all ASME standards.

- Designed for hands-free unloading
- Durable powder-coated finish
- Proven for safety, strength, and longevity
- 100% Welded steel construction
- Lightweight and durable

MEET THE NEW INDUSTRIAL SERIES SELF DUMPING BINS.

Meets or exceeds all ASME standards

LEARN MORE

CHANCE FOUNDATION SOLUTIONS

CHANCE® helical piles provide proven high-capacity solutions for deep foundation applications such as expansive soils, high water tables, fill areas, and other areas where unstable soils require piling. When you choose CHANCE helical piles you can trust they are backed by strong, technical expertise and the largest distribution network in North America. You receive quality product and unrivaled support.

Hubbell Power Systems, Inc (HPS) proudly manufactures CHANCE helical piles—the only helical pile that operates with regional distribution service partners, offering clients economies of scale and a variety of ready-to-ship material in close proximity to any project. CHANCE helical piles are used worldwide to secure residential and commercial buildings, tower foundations, heavy equipment foundations, and many other deep foundation applications.

Engineered for dependability and long-term stability, CHANCE foundation solutions feature exclusive anchoring techniques, tools, designs, and sizes to suit a broad range of applications. Applications for helical piles are far reaching. Grow your business and utilize helical piles for new construction, commercial lighting, marine tiebacks, cell towers, solar and wind power foundations, oil and gas applications, signage, boardwalks, and much more.

LOCAL EXPERT

You'll be supported throughout your project by local experts. Your local distributor is not only a product expert, but truly understands the soil conditions in your area along with proper capacity, load time, and necessary equipment. They are your go-to team supporting you throughout the project.

READY-TO-SHIP INVENTORY

Reduce project delays when you use CHANCE helical piles. We have inventory on hand and local distributors ready to mobilize. CHANCE helical piles are sold through the largest distribution network in North America. This means no matter where your project is, the odds are good that we have a distribution service partner close to you that can deliver. We understand that time is money, and CHANCE helical piles mean substantial savings.

Choosing CHANCE helical piles means having confidence at all stages of your project.

GUARANTEED RESULTS

CHANCE helical piles have a rich history as the industry-leading deep foundation solution. Albert Bishop Chance pioneered the industry, creating and patenting the first practical earth anchor in 1912. Today, there are more CHANCE helical piles installed than any other—and still holding strong.

Our engineers aren't resting on our legacy. We continue to push toward the future by offering you product innovation and specialized tools. HeliCAP 3.0, our proprietary cloud-based helical capacity design software, performs powerful calculations on your site soil parameters to help you help you maintain control over essential criteria to affect the same process our application engineers employ daily to analyze problems and specify solutions. HeliCAP 3.0 provides correlation between blow count and soil profile which allows for greater engineering judgment, more efficient soil profiles, and more accurate results. ■

DEFY DENSE SOILS

ROCK-IT™

Helical Pile
Lead Section

ROCK-IT is an innovative solution that penetrates rocky, high blow count, or even permafrost soils without pre-drilling or field modification. The single carbide, patent pending design was developed after site testing of several rock anchor configurations to provide an economical, yet proven solution to reach loadbearing depths in high blow count material.

COMMAND ALKON

The construction industry has traditionally lagged behind other industries in the adoption of digital capabilities. This is a significant factor as to why jobsite productivity has remained stuck over the past 2+ decades. As the world's second largest industry, construction projects positively affect communities all around the world, and their impacts are decades or centuries lasting. Today, the opportunity to better steward resources and enrich lives—enabled through new construction technology—is massive.

Command Alkon is dramatically improving how contractors, bulk material suppliers, logistics providers, jobsite inspectors, project owners, and more interact through CONNEX—our collaboration platform built specifically for the heavy work industry.

COLLABORATION

CONNEX allows businesses within the heavy construction industry to harness problem-solving energies and gain insights into every aspect of their supply chain. The platform allows companies to simplify data and analytics across their trading partners, and streamline operations for greater efficiency and productivity.

Command Alkon's CONNEX Platform helps trading partners conduct business with each other and automate processes. Transactions are executed and information collected to deliver insights with a speed and accuracy that fuels success on the heavy jobsite. CONNEX can gather data from IoT devices, telematics, and more, running analytics to inform about a business' performance. The CONNEX Solution Suites automate business critical processes in a company and across its trading partners.

SOLUTIONS

Market pressures are squeezing construction budgets, margins, schedules, and material supplies. By digitizing and automating processes across an integrated platform like CONNEX, data-driven heavy materials operations can save time and money, improve safety and compliance, reduce mistakes and downtime, and boost their competitive position. Just 2 to 3 percent of productivity gains translate into multi-billion-dollar savings. Savings from the implementation of Command Alkon solutions can ultimately mean more schools, hospitals, libraries, etc. within a community, making better places to live for all people.

The materials that the heavy work industry makes, hauls, or buys are almost always on the critical path for the end customer. It's crucial to be able to react quickly to bottlenecks that might throw a wrench in operations and throw jobs off schedule.

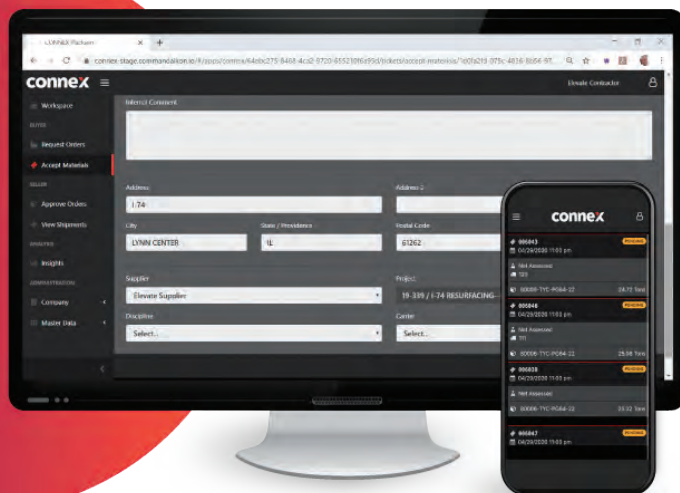

Many innovative construction companies are increasingly investing in software that allows them to track and trace these materials from the moment an order is made all the way until the material reaches the jobsite – even after, during the payment process. Seeing more and knowing more as materials and data flow helps to ensure jobs are completed on time and in budget. CONNEX helps to do this by connecting trading partners more precisely, speedily, and easily than ever before, allowing disparate systems to talk to one another. Each constituent has access to the exact same information, enabling greater traceability of products across multiple partners, locations, and facilities.

PLATFORM

Command Alkon has digitized over 35 million material ticket flows between project owners and contractors and their suppliers. The 35 million and rapidly growing automated and paper-free workflows are successfully removing significant transactional costs from projects using our collaboration platform. As transactional costs can represent upwards of 40 percent of a project's costs, digital competencies go a long way in reducing project spend, and consequently freeing those newly available resources to apply across more projects. ■

Diablo Drill Bits

Rebar Demon™ SDS-Plus & SDS-Max 4-Cutter Full Carbide Head Hammer Drill Bits

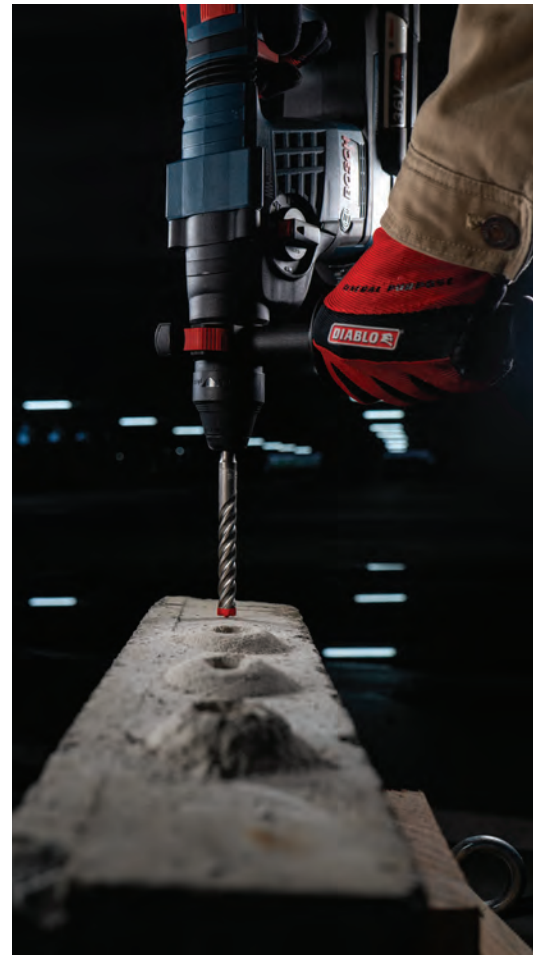

Diablo, a solution-oriented range of best-in-the-world and best-for-our-world products for the professional user, introduces a new full-range of SDS-Plus and SDS-Max Rebar Demon™ 4-cutter full carbide head hammer drill bits for concrete and reinforced concrete applications. Designed with innovative technology to meet the user's needs, this new range answers the growing issues of life, durability, strength, and speed.

Concrete building trends continue to grow at a fast pace, driven by both the robust economy and building codes

for commercial and residential sectors. The building materials industry is creating higher-strength concrete and rebar forcing power tool manufacturers to develop stronger, more powerful drills. However, current drilling solutions in the marketplace have not kept up with these growing trends: the ability to handle high-heat, tough to drill applications such as rebar, or being fast enough to minimize labor costs.

For years, Diablo has received end-user feedback requesting state-of-the-art products to address durability, strength, speed, and labor costs, all of which are not currently offered. Diablo's first-ever complete range of Rebar Demon™ 4-cutter full carbide head hammer drill bits is the ultimate solution for drilling fast, precise holes without the need of changing to a rebar cutter to drill reinforced concrete, delivering extreme savings in time and money.

Diablo's revolutionary range of SDS-Plus and SDS-Max Rebar Demon™ 4-cutter full-carbide head hammer drill bits are the only bits designed to be the most durable, fastest, and coolest solutions on the market. The Rebar Demon bits feature up to 2X more Dura-Carbide to withstand up to 1800°F of intense heat whereas standard bits fail at 800°F. Diablo's impact resistant 4-cutter full-carbide head withstands the stress of high-powered hammer drills and the impact of rebar by taking small bites of rebar to deliver controlled carbide wear, reduced vibration and up to 7X longer life. Produced with Tri-Metal Fusion Welding, the full-carbide head resists heat and prevents breakage in extreme impact situations. Precision Tip delivers

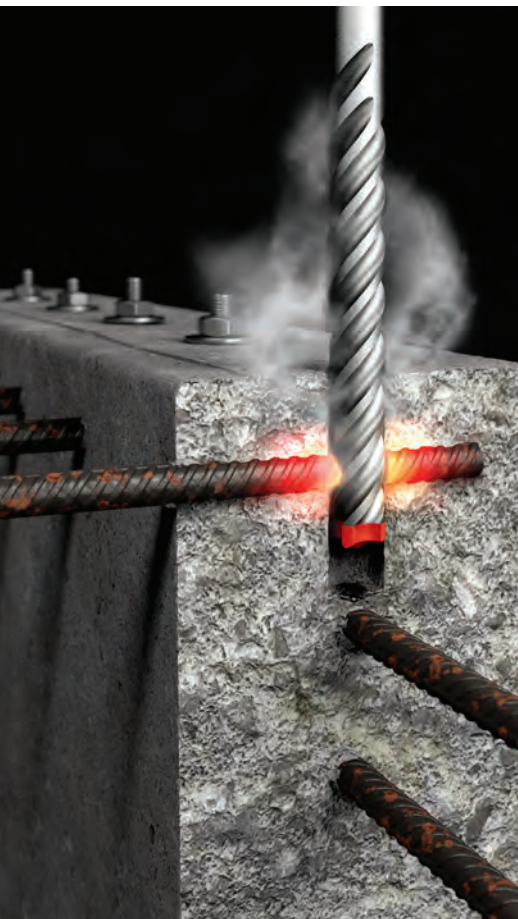

the stability and accuracy required to produce fast, precise holes in reinforced concrete for anchor setting. ■

Diablo's Rebar Demon™ range includes (75) hammer bits, covering a range of sizes:

- SDS-Plus range: 5/32 to 1-1/8 in.
- SDS-Max range: 3/8 to 2 in.

EASY-KLEEN PRESSURE SYSTEMS

Family owned and operated since 1982, Easy Kleen has more than 37 years of experience manufacturing high-pressure cleaning equipment. Easy Kleen does things differently. They have a hands-on approach to ensure that the equipment not only meets the customers' needs now but also takes future growth into account. Easy Kleen has equipment in the field that has been in use for more than 30 years due to its rugged, dependable, and serviceable design. The complete line of hot and cold water pressure washers, jetting equipment and trailer options, dry steam generators, hose reels, and modular heaters for vacuum trucks are designed and manufactured in a 80,000-square-foot, state-of-the-art facility in Canada.

SOLID COILS

Coils are designed and manufactured in-house as well. The coil pipe is purchased directly from the mill in lengths up to twice as long as the competition. This minimizes seam welds within

the coils. Easy Kleen coils are solid. 100% pipe penetration is achieved during the fusion welding process versus the competitors stick welding process, which only yields 60-70% pipe penetration. The pipe is elliptically wound with a CNC 11 axis pipe maneuvering machine which eliminates flow restrictions. Each layer of pipe is structurally braced and welded to the next to reduce pipe vibration and wear. The coil mounting studs are welded directly to the coil pipe, the pipe cannot move around within its skin. Everything down to the cutting and rolling of the skins to the stamping of the lids is carried out within the factory. CRN/ASME 30.1 pressure vessel coded coils are also available.

Rugged: the only word needed to describe Easy Kleen frames. Fully welded with 3 mil power coat finish, these frames will stand the test of time. Designed in-house using 3D Solidworks software, each frame is designed for maximum serviceability. All of the components on an Easy Kleen machine are easy to access, which makes them easy to maintain and service.

SUPERIOR COMPONENTS FOR SUPERIOR PERFORMANCE

All components are sourced direct from industry leading manufacturers such as Honda, Kohler, Kubota, Techtop, General Pump, Cat Pumps, Wayne Burners, just to name a few. These companies offer vast service and parts networks which are ideal in the global marketplace. The range of equipment is broad, from smaller units utilized in butcher shops to continuous duty systems used 24 hours a day, 7 days a week, in major manufacturing and processing plants, Easy Kleen has a system to meet your application needs. This company is more than a factory that takes steel and components and makes products, they are a problem solving company with vast knowledge and experience with thousands of applications. Your jobsite needs an Easy Kleen machine! Call today to see what Easy Kleen can do to solve your toughest cleaning jobs. Ask about our pickup skid option for 100% portable cleaning. ■

*For more information,
visit www.easykleen.com,
or call 800.315.5533.*

BUILT TO LAST

"We purchased a pickup skid for our harvesting operation and so far its working out really well! The reliability has been excellent! Having the pressure washer and water tank together just makes it so easy to load up with the forklift and take it out to the equipment to keep it clean and running cool."

Joe Blaney, Owner of Blaney Logging Ltd.

Portable Pickup Skid Unit

The Easy-Kleen Pickup Skid Unit is a totally self contained system that allows for 100% portable cleaning. These units have been designed to fit perfectly into the 6'6" box of a pickup truck. Forklift slots and a lifting eye makes loading this unit easy and efficient.

EASY-KLEEN
PRESSURE SYSTEMS LTD.
MANUFACTURER OF HIGH PRESSURE CLEANING EQUIPMENT

EXPRESS BLOWER, INC.

Innovation, Production, and Superior Customer Support

For more than 25 years, Express Blower, Inc. has led the pneumatic blower truck market with innovation, state-of-the-art systems, and practical experience, resulting in a greater number of large-size machines working in the field today than any other manufacturer. The mantra, "We are selling a business, not just a piece of equipment," is ingrained in Express Blower's culture and is reflected in the equipment and customer service provided to its customers.

EQUIPMENT TO MEET EVERY NEED

Beginning as woodchip blowers more than 70 years ago, today there are a variety of Express Blower (EB) machines, some powerful enough to productively blow 1.5-inch aggregates more than 1,800 feet and soil blends more than 2,000 feet.* Including all available power packages, as well as the newly designed PTO driven high-output "HO" models and the compact TR-HD model, EB now offers 11 different machines. There are also two machines available through the Express Mulcher™ line, with walking floor, hose reel, and limited options for companies interested in a more economical machine to be used primarily for lightweight material applications.

VIBRANT USED EQUIPMENT MARKET

Express Blower machines are built to last, and this longevity has resulted in a vigorous used equipment market. Recognizing that building new machines plus refurbishing used machines could strain factory and personnel capacity, EB partnered with Conveyor Application Systems, LLC (CAS) to assist in the refurbishment and sale

of used EB machines. CAS is a Rexius Forest By-Products company which was the inventor of EB machines and the creator of Express Blower, Inc. Their knowledge and experience are a great asset to this market. While customers speak directly with the EB sales team when purchasing new or used equipment, CAS is responsible for securing the used equipment inventory and refurbishing the machines to get them in sellable condition.

www.usedblowertrucks.com

UNLIMITED OPPORTUNITIES

Save time. Save labor. Offer services that few companies can while providing your business with year-round revenue streams. EB makes it easier for you to expand your business and capitalize on high profit specialty applications like erosion control blankets and berms, green roof media installations, Terraseeding®, aggregate placement, and playground safety surface installation.

Erosion Control Blankets, Sediment Control

Berms, Filter Sock: EB application delivers 100 percent ground contact for greater success at controlling runoff and stabilizing slopes. Even large and/or remote sites become instantly accessible, manageable, and profitable.

Green Roofs:

While all EB machine models can go vertical for green roof installations, certain models have blown rooftop soil mixes more than 30 stories high, eliminating the need for cranes, wheelbarrows, and manlifts and decreasing the amount of labor needed for installation.

Seeding is Believing: Terraseeding is a proprietary system that provides the calibrated injection of seed into the material blow stream for a single step application that produces amazing results for residential lawns, athletic turf, erosion control blankets/berms—even use with wildflower seed.

EXPRESS BLOWER, INC.

Express Blower claims the industry's most experienced and knowledgeable people in both sales and aftermarket product support and takes great pride in its superior customer service. Onsite training with equipment purchase, exclusive owner's conference, expert technical support, extensive parts inventory to maximize uptime and productivity, plus exceptional warranty coverage are just a few of the reasons that EB continues to grow and expand its customer base. ■

**Performance may vary depending on type and quality of material used, operator proficiency, and jobsite setup, requirements, and specifications.*

GAS CLIP TECHNOLOGIES

Simple Solution to Your Gas Detection Needs

Although keeping employees safe while at a worksite has always been a priority, this year's world events have placed a spotlight on maintaining safety through prevention. Gas detection is a prime example of that concept, and one of the top manufacturers of gas detection solutions is Gas Clip Technologies. They have spent over a decade specializing in providing dependable, compliance-based, affordable gas detectors that utilize cutting-edge technology. Their innovation has led to multi gas detection that is simpler and safer than ever. One prime example is their popular Multi Gas Clip Simple Plus.

TECHNOLOGY THAT LASTS

Like all of their detectors, the Multi Gas Clip Simple Plus arrives fully charged, calibrated and ready to use straight out of the box. However, this simple-to-use, portable multi gas detector is the first wearable gas monitor that runs for three years without needing to be recharged or recalibrated. Its longevity comes from the advanced low-power LED photometric infrared technology. Most multiple gas detectors must be charged every day. However, the extremely low drain on the detector's battery makes the Multi Gas Clip Simple Plus the only multi gas detector on the market today to provide 1,095 days of continuous use without recharging. The constant hassle of making sure that detectors are fully charged before each use along with the daily concern of detectors powering down in the middle of a job are both eliminated.

SAFETY AND RELIABILITY

Additionally, the use of low-power LED photometric infrared LEL sensor

technology allows the Multi Gas Clip Simple Plus to more reliably detect the presence of combustible gases. Even in the most extreme conditions, the monitor has proven dependable by immediately warning workers of the presence of combustible gases (Lower Explosive Limit - LEL), hydrogen sulfide (H_2S), and carbon monoxide (CO), as well as the deficiency or enrichment of oxygen (O_2) in the atmosphere. With the Multi Gas Clip Simple Plus, workers can focus on the job at hand knowing that they can rely on their gas detectors to alert them when there is exposure to dangerous gases no matter the situation.

WHAT MAKES EVERYTHING SIMPLE

Another resource-saving feature that contributes to the safety and operation of the Multi Gas Clip Simple Plus is the ability to perform a full-function self-test upon activation and at regular intervals for the life of the detector to ensure proper operation of the sensors, battery and circuitry. If there is a problem, the failure alert feature displays an error message to notify the user and helps prevent workers from entering potentially unsafe conditions with faulty equipment. Additionally, the Multi Gas Clip Simple Plus allows customizable alarm set points and detailed data logging. Valuable information is documented in one-second increments, which in turn provides a "black box" of critical details that map out the development of gas exposure from the moment of detection.

TOP-QUALITY CLIENT CARE

In conjunction with Gas Clip Technologies' superlative products, their customer service department is second-to-none. Their team tests 100% of their detectors before shipping them to clients in order to guarantee product quality. This procedure helps eliminate potential downtime and expenses that can occur due to detector malfunctions. ■

Since Gas Clip Technologies' products are available through distributors worldwide, innovative gas detection solutions are always within easy reach.

MGC Simple + Where Simplicity Meets Longevity.

- Three-year continuous run time
- Recharging not necessary
- Recalibration not necessary
- One-button operation
- Failure alert function
- Functional in inert atmospheres
- Data logs in one-second intervals (from point-of-detection)
- LEL sensor immune to poisoning
- Detects combustible gases (LEL), H_2S , CO & O_2

GORMAN-RUPP PUMPS

For more than eighty-five years, Gorman-Rupp has manufactured the high performance, high quality pumps and pumping systems required for lasting service in the municipal, water, wastewater, sewage, industrial, construction, petroleum, and OEM markets. Our extensive line of pump products include self-priming centrifugal pumps, standard centrifugal pumps, submersible pumps, trash pumps, priming-assisted pumps, and rotary gear pumps. Gorman-Rupp also manufactures a complete line of state-of-the-art packaged lift stations and booster stations that include pumps, motors, controls, piping, accessories, and enclosures.

Through the years, our continued growth has focused on superior pump design, engineering, and customer service. As a result, Gorman-Rupp has become a company known for market innovations and improvements that continue to set standards for the pump industry.

Gorman-Rupp operates two manufacturing plants, producing a full line of pumps and sewage pumping stations with custom-made fiberglass enclosures and electrical control panels.

Gorman-Rupp has over 1,000 distributors throughout the United States and the world that are qualified to give expert advice on pump selection and applications. If you have a service problem,

a factory-trained distributor is only a phone call away. Our distributors are backed by the fastest parts service in the industry. Gorman-Rupp stocks more than 60,000 pumps and parts and ships 99 percent of them within twenty-four hours so your parts will be there when you need them.

CONSTRUCTION MARKET

Gorman-Rupp is the leading manufacturer of pumps for the construction market. Offering nearly 3,000 models, we have one of the largest selections of fluid-handling products in the world. We have built our reputation on the workhorses of the construction pump market: self-priming centrifugal trash pumps. These dependable, versatile performers help contractors move large volumes of water quickly. We also manufacture an

extensive line of submersible, diaphragm, and priming-assisted pumps that offer maximum reliability and service life.

INDUSTRIAL MARKET

You will find Gorman-Rupp pumps operating in the most hostile industrial environments—down in the sub-basements; in the waste sumps; in the heat, steam, grease, and grime; handling the corrosive and abrasive industrial wastes other pumps cannot. Performing reliably month after month, year after year, in all types of waste control systems, pumping solids and debris that would shut other pumps down, Gorman-Rupp industrial pumps are designed for the people who service them.

MUNICIPAL MARKET

Gorman-Rupp sets the industry standard for sewage pumping systems including pumps, motors, and controls (complete sewage lift stations). Our solids handling self-priming and submersible sewage pumps offer maximum dependability and ease of service. Our commitment to “total system responsibility” means you only have to make one call should you encounter a problem with your system, from pumps and controls to the lights and fans in our enclosure. We simply offer the best sewage pumps and pumping systems in the industry. ■

WHEREVER PUMPS ARE NEEDED, GORMAN-RUPP SENDS THEIR BEST.

Helping construction managers reach new heights of productivity.

In Austin, Texas, there's a building boom that won't stop. As scores of new high-rise buildings transform the skyline, construction deadlines are tight. The ability for crews to clear the jobsite of water and mud so they can get back to work is crucial. To get projects done on time and on budget, construction managers choose diaphragm pumps from Gorman-Rupp's AMT Pump Company. From industrial and construction to OEM and fire protection, any application that needs a pump can use a solution from one of our family of brands. Wherever life takes you, you'll find Gorman-Rupp raising the standards for quality, reliability, and safety.

For more information, contact your nearest Gorman-Rupp distributor or visit GormanRupp.com.

ISUZU COMMERCIAL TRUCK OF AMERICA, INC.

Isuzu Commercial Truck of America, headquartered in Anaheim, California, has dealerships in all 50 states. Isuzu's parts distribution centers in California, Ohio, and Pennsylvania serve these 300+ dealerships. Isuzu also operates four ports (Baltimore, Jacksonville, Tacoma, and San Diego), and has FTR and N-Series gas truck production in Charlotte, Michigan. This footprint speaks volumes for Isuzu's ability to serve you and this extensive lineup is sure to have a truck for you.

The Isuzu lineup consists of the N-Series (Class 3-5) with GVWRs from 12,000 to 19,500 lbs in diesel or gas powertrains and the F-Series FTR (Class 6) with a 25,950 lbs GVWR and a diesel powertrain. Historic Isuzu quality and a low cost of ownership have made Isuzu the #1 best-selling Low Cab Forward truck in America since 1986.

MORE THAN A CHASSIS

Isuzu trucks are more than a chassis. Their day-in day-out performance is what hard-working men and women rely on to stay productive and earn their

living. Isuzu knows their trucks' uptime is key to operations and productivity. Today's customers demand timely and cost-efficient maintenance. Isuzu dealerships take this seriously and their trained technicians are prepared when maintenance is required. Many Isuzu dealerships have online service scheduling, and they all have access to Isuzu Genuine Parts and value-priced FleetValue Parts that are built to OEM specs.

MAINTENANCE PROGRAM

New Isuzu truck customers can protect themselves from the rising costs of labor and parts with the Priority Service Maintenance Program (PSMP). This customizable maintenance program is not only cost-efficient but provides a huge amount of convenience. Because PSMP has preset maintenance schedules, your Isuzu dealer can quickly see what services are needed; the best part is you get priority treatment and the payment is already handled. Moreover, every new

Isuzu truck comes with an Oil Coverage program that covers your first few oil changes to lessen your costs and get you acquainted with the dealership.

WARRANTIES

Isuzu also offers extended warranties to protect you further down the road. These are some of the most comprehensive coverages in the industry. Another added benefit is Roadside Assistance. If you are ever in need of help, rest assured that Roadside Assistance is included with every new truck and covers the life of the 3-year standard limited warranty and even the available extended limited warranties.

EASE OF FINANCING

All of this makes owning an Isuzu truck a great experience, and now let's talk about the Isuzu truck buying experience. Financing is normally one of the biggest hassles in purchasing a new work truck. Finance managers run numbers from various lenders with many great rates and promotions. There is some good and some bad to that. Choices can be good, but complicates the process as well. However, Isuzu's captive finance company, Isuzu Finance of America (IFAI), is a leader in financing and leasing Isuzu trucks. This simplifies things. Not only does IFAI offer competitive rates and great lease promotions, its people know Isuzu and can give customers great terms that suit their business for the long term. ■

When you are shopping for your next truck, definitely look to Isuzu Commercial Truck of America. Isuzu has the product and customer support to make your ownership experience a special one!

ISUZU MOTORS AMERICA, LLC

Isuzu. Caring people providing The Power behind it all.

Our legacy of strength and kindness is essential for our Global life, as we reach countries around the world with the power to meet their needs. Today, with more than 190 countries experiencing worldwide uncertainty with pandemic proportions, we are here to support your power requirements by providing environmentally responsible products for your specific applications. We are always available to understand your needs as they relate to your business and that of your customers. We know these are difficult times but our problem solving and product support can make a difference in your business challenges.

GLOBAL LEADER OF INNOVATIVE POWER

As a producer of on-road commercial vehicles, off-road Diesel and Alternative Fuel Engines and Power Units for unlimited applications. We have built and maintained a world-class organization to provide power solutions that work. Because of our manufacturing operations and expanded products in more than 100 countries, we now have over 28,000,000 engines produced globally. Isuzu ensures the most advanced performance and services, with a goal to become the new

international standard of excellence in product development, quality, manufacturing, and customer support.

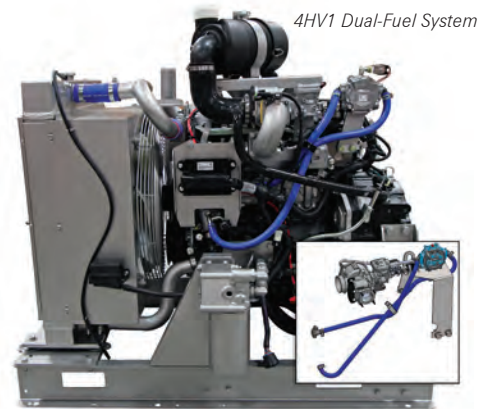

ALTERNATIVE FUEL AND NEW DUAL-FUEL POWER UNITS

Our Alternative Fuel Engines and Power Units using natural gas or propane can now be equipped with a new Dual-Fuel System to simply reconfigure the fuel source and eliminate downtime.

These Dual-Fuel Power Units are being recognized as industry leading for their innovative ability to change from one fuel to another, while on location, without shutting down an entire jobsite to change an available fuel source. An example would be a market like Louisiana where higher levels of hurricanes occur and natural gas gets interrupted. These Dual-Fuel Power Units can be switched off and restarted with a flip of a switch to easily change to a readily available propane tank.

ISUZU PRODUCTS, BUILT TO LAST

Isuzu has proven to be Reliable, Eco-friendly, Durable, and Technologically Advanced since 1916. Our Tier 4 and Stage V Engines and Power Units, branded under Isuzu REDTech™, provide quiet, low maintenance and fuel-

efficient solutions for existing and new applications. From 6.7kW to 397kW, these Engines and Power Units use the latest after treatment DOC or DOC+SCR, with vertical or horizontal SCR for design flexibility. Every Isuzu Engine or Power Unit is precision tuned for its highest efficiency, while reducing oil and fuel consumption. A long-lasting and robust fuel injection system incorporates excellent fuel economy and extended service life. Stringent criteria to lower NVH (noise, vibration, harshness) are engineered into every Isuzu product. Each application is designed to meet customer specifications and is engineering validated for each environment. Isuzu REDTech™ Engines and Power Units with reliable performance, durability, and high thermal efficiency help reduce downtime. All of our products are supported by Genuine Isuzu Parts, a Distributor and Dealer network along with dedicated professionals disciplined in engineering, manufacturing, and management to ensure the right customer solutions. ■

JEFFREY MACHINE, INC.

Jeffrey Machine Inc., a third-generation family owned business, is an innovative, global leader in auger manufacturing and technology. With highly skilled engineers and machinists in place, Jeffrey Sager, knows how to be the direct force in this market and understands that down time costs customers money. With that in mind, he has led his company to the next level in numerous ways including adding a second location in Euless, Texas, which along with the main headquarters in Birmingham, Alabama, means customers get what they need faster than ever before.

TOUGH & DEPENDABLE

Toughness and dependability are what Jeffrey Machine tools are known for. They deliver the finest, most comprehensive line of drilling tools in the industry. They can create various sizes starting at 6 inches for dirt and rock augers up to 18 ft, CFA, core barrels up to 15 ft, to a full line of utility augers, revolutionary Dragon's Tooth® Rock Cutting System, and much more. Their custom manufactured tools are designed to devour the densest rock, eliminate project downtime, and reduce wear-associated costs. In addition, they boast one of the world's largest inventories

needs and adding new areas of potential expansion into new markets.

CRIMSON RED COATING

In 2016, in celebration of its upcoming 40th anniversary, Jeffrey Machine introduced a unique, new feature—crimson red coating on all new tooling. With this bright, new finish, the products not only stand out for their unmatched quality, but they are instantly recognizable as tooling produced exclusively by Jeffrey Machine, Inc. Most of Jeffrey Machine's tools, with the exception of custom tools, can be purchased online for quick shipping.

Jeffrey Sager, president, Jeffrey Machine

In 2017, Jeffrey Machine celebrated its 40th anniversary and we are proud of the longevity and advances we have made in the drilling tool industry. We owe our success and longevity to our ability to really listen to our customers, customize tools to their exact requests—and to provide those tools at competitive prices, on a timely basis.

of wear parts and components for the drilling tool industry. Their state-of-the-art facility uses both standard and proprietary equipment, including a game-changing Plate Roll that greatly increases our capacity to quickly roll cylinders of up to 2-inch thick material up to 10 ft long, in diameters as small as 2 ft and as large as 15 ft, making it perfect for barrels, cylinders, and coring products that need a quick turnaround from shop floor to jobsite. This custom Plate Roll was a huge investment and has paid off by greatly improving the factory's ability to be more responsive to customers'

What began as a small machine shop in 1977, has turned into an internationally known and respected player in auger manufacturing (or drilling tool industry). In 2001, a 20,000-square-foot shop was built, and due to increasing demands, another of equal size was constructed in 2002. Another expansion completed in 2007 brought the facility to over 100,000 square feet, making Jeffrey Machine one of the world's largest independent auger manufacturers. Early 2021, Jeffrey Machine is planning for another expansion with a 14,000-square-foot warehouse for stock parts. ■

LIGCHINE

Laser-guided Screeds

Ligchine is a global leader in innovative laser-guided and 3D GPS/LPS-guided concrete screeds. Since its founding in 2007, the company has rapidly expanded its position in the market and now offers a full line of automated concrete screeding machines that service flatwork companies from small owner-operated companies to large global concrete contractors. The company's headquarters, engineering and manufacturing are located in the United States, and in addition to a direct sales force in the US, the company has an extensive network of international dealers and partners to serve customers anywhere in the world.

WHAT WE DO

We design and manufacture reliable and cost-effective concrete leveling machines known as "laser-guided screeds." We are also a leader in innovative, lightweight drive-in systems for upper deck concrete and slab-on-grade screeding applications.

Our screeds are production machines specifically developed for commercial flatwork and can dramatically reduce dependence on labor, which is often in short supply, while yielding a higher-quality end product.

OUR EQUIPMENT

Ligchine recently introduced the SCREEDSAVER ELITE™, the most complete, mid-priced boom screed developed by the manufacturer.

This new and innovative machine introduces all new key features including:

- The game-changing, SIDE-SHIFT SCREED HEAD makes it easier to screed around stick-ups in the slab with pinpoint accuracy.
- ALL-WHEEL DRIVE for unmatched mobility and power.

- HEAVY-DUTY BOOM sections reaching out to 18 feet for greater stability and accuracy.
- NARROWER CHASSIS for easy access through restricted entries.
- New, more ergonomically friendly REMOTE CONTROL.
- 360° ZERO-TURN CAPABILITY and EASE OF TRANSPORT with a ¾ ton pickup truck are signature features of all Ligchine boom screeds.

The SCREEDSAVER ELITE is the most innovative laser-guided screed machine to join Ligchine's SCREEDSAVER family of machines.

In 2019, Ligchine introduced the SPIDERSCREED™ – a compact, and maneuverable drive-in system designed for upper deck concrete and slab-on-grade screeding applications. The drive-in SPIDERSCREED™ machine was designed to be lightweight and powerful, featuring a 100% TIG welded tubular cage design that keeps overall weight down to approximately 1,280 lbs. Its patent-pending Versa-Drive system, independent zero-turn drive, up to 90° horizontal drive, and lateral drive make it a unique drive-in screed. The SPIDERSCREED™ features Ligchine's patented machine leveling system to ensure flatter floors and greater compaction than simple screed head only leveling systems.

Ligchine introduced the SCREEDSAVER II™ machine in 2008 as the world's most competitively priced boom-operated screed

ever offered to the industry. SCREEDSAVER II™ includes a zero-turn drive system, making it the perfect companion for cut-up jobsites and spaces that no other boom screed would attempt to complete. The wireless remote-controlled SCREEDSAVER II™ achieves world class FF/FL numbers that only a stationary boom operated screed can reliably produce.

Ligchine developed the "large line" sized boom screed in 2012. The SCREEDSAVER MAX 200 is the workhorse of the Ligchine fleet. SCREEDSAVER MAX 200 integrates the technologies of the standard SCREEDSAVER II with the added features of front wheel drive and rear wheel steering, a 90° manual pivoting drive frame, and Kubota's 25 hp D902 diesel motor. Like all Ligchine screeds, the MAX 200 is a wireless remote-controlled screed.

Introduced in 2017, SCREEDSAVER PRO 220 offers the best of all worlds. The PRO 220 combines the accuracy and durability of our standard MAX 200. Unique to the PRO 220 is the inclusion of our patented zero-turn drive system that allows BOTH the upper boom frame AND the lower drive frame to independently spin 360°. It also features our automated concrete additive spray bar system integrated into the screed head. ■

***Start saving dollars on
your labor today and increase
your profitability tomorrow with a
SCREEDSAVER machine.***

INTRODUCING:

SCREEDSAVER ELITE

THE GAME-CHANGER

The **SCREEDSAVER ELITE** is Ligchine's newest laser-guided concrete screed machine to join the **SCREEDSAVER** line of innovative, labor-saving machines.

New key features include:

- **ALL-WHEEL DRIVE** for unmatched mobility and power.
- **HEAVY-DUTY BOOM** sections reaching out to 18 feet for greater stability and accuracy.
- The game-changing, **SIDE-SHIFT SCREED HEAD** makes it easier to screed around stick-ups in the slab with pinpoint accuracy.

METSO OUTOTEC

Correct Equipment: Key to Running Successful Recycling Business

The use of recycled concrete and reclaimed asphalt pavement (RAP) has grown exponentially on a global scale, offering practical business opportunities for small- to medium-sized crushing contractors.

Waste management has become an issue of increasing concern as cities run out of landfill space. To provide context, the Environmental Protection Agency (EPA), which measures the generation of construction and demolition (C&D) waste in the United States, estimated that 569 million tons of C&D debris was generated in 2017.

Recycling and reuse have, therefore, been identified as the efficient solutions in dealing with waste. The U.S. Federal Highway Administration (FHWA), for example, supports and promotes the use of recycled highway materials in pavement construction, in an effort to preserve the environment, reduce waste, and provide cost-effective material for the construction of highways. About 80 percent of asphalt removed from U.S. roads is recycled, according to the FHWA.

WHAT TO LOOK FOR

For contractors to take full advantage of this surge in recycling demand, the choice of correct equipment from a reputable supplier that has a strong global support footprint is

key, says Vesa Tuloisela, director, Nordtrack offering, Metso Outotec.

Some of the key considerations when buying crushing equipment for recycling concrete and asphalt, advises Tuloisela, include equipment compactness, ease of use, ability to be moved easily between worksites, accessibility, reasonable price point, quick return on investment, and product support.

NEW NORDTRACK RANGE

Metso Outotec has a long history of offering purpose-built equipment for recycling. A case in point is its Lokotrack LT1213 horizontal shaft impact (HSI) crusher, which has been serving this sector with great success over a long period of time. This unit is renowned for its high capacity and efficient fuel economy. It can operate as a primary or secondary crusher—especially in recycling applications, such as processing concrete, asphalt, and demolition waste.

The launch of the Nordtrack range in October 2019 ushered in a new era for the global recycling contracting sector. A key feature that appeals to this group of customers is the compactness of the range.

“Typically, most recycling projects happen at the point of demolition to reduce transport costs. This is mostly

in urban areas, where space is at a premium. It’s important that crushing machinery is compact in size and easy to move between sites,” says Tuloisela.

The Nordtrack 1908S, for example, is a crusher and screen in one. It is a compact, lightweight recycling crusher that is easy to transport between project sites.

TIME IS CRITICAL

Recycling contracts by their very nature are short, with strict project timelines. Consequently, crushing contractors are looking for quick lead times for their crushing equipment. Delivery times for Nordtrack equipment are usually just a few weeks, on average. With standard designs for off-the-shelf availability and plug-and-play features, complemented by an extensive Metso Outotec support network, these mobile solutions make it easy to get contracting operations up and running quickly.

With recycling contracts mostly small in size and value, crushing contractors are looking for affordable solutions.

“The Nordtrack units are generally smaller and compact in size with a lower price point than larger units with more options and tailoring. Thanks to various leasing possibilities, too, contractors can get started in the recycling business with a moderate initial investment,” concludes Tuloisela. ■

The Nordtrack range includes 19 products, such as small to midsize jaw crushers, impact crushers, mobile screens and mobile conveyors. The products are designed to be used in multiple applications, whether it be aggregate production, recycling or sand and gravel. The range is ideal for contractors looking for flexibility—to have a solution they can use in any application and move from one application to another. Read more at www.metso.com/nordtrack.

Make contracting more productive

Metso Nordtrack™ mobile crushers, screens and conveyors make it easy to get your operations up and running—on time and within budget. With plug-and-play options backed by a global support network, Nordtrack™ is the dependable choice for contractors to meet production schedules and requirements.

NATE

NATE: The Communications Infrastructure Contractors Association is a non-profit trade association dedicated to providing a unified voice for companies in the diverse tower and communications infrastructure construction, service, and maintenance industries. For more than 25 years, NATE has been the undisputed global leader in safety, quality, standards, and education for the tower and communications infrastructure industry.

NEXT LEVEL OF SAFETY

In 1995, NATE was established by a small group of tower service companies who were passionate about guiding the industry toward a higher level of safety, education, and protection. As a Communications Infrastructure Contractors Association, we are here for the companies, contractors, and people who are moving full speed towards tomorrow. Our members are dealing with 5G, DAS, and wireless applications that can be installed on rooftops, streetlights, at ground level, and underground. Our membership has moved far beyond

tower building and maintenance crews to include businesses and contractors involved in every facet of wireless communications—from installation to delivery to maintenance and development.

NATE membership continues to grow at an astonishing rate, with member companies located throughout the United States and Internationally. NATE has proven that a good idea, coupled with relentless effort, can take you a long way, but there is still much more for NATE to accomplish. From developing new methods to facilitate education and training, to creating an industrywide culture of safety, NATE members have proven that getting involved makes a difference.

Through NATE's legislative and regulatory efforts, the Association continues to work diligently with officials from U.S. DOL – OSHA, U.S. SBA, FCC, U.S. DOT, FAA, NTIA, FirstNet, members of Congress, Congressional Committee staff, and other federal and state government entities in order to advance the interests of our member companies in the policy and regulatory arenas.

Additionally, NATE is a leading voice for workforce development in the industry. The Association's leadership has committed to investing in workforce development initiatives in order to promote the professional career path opportunities available in our thriving industry.

2021 5G: SMALL CELL DEPLOYMENT TRAINING COURSES

For the sixth consecutive year, NATE has been selected by the U.S. Department of Labor - OSHA to receive a Susan Harwood Targeted Topic Training Grant for the 2020-2021 program year. The topic to be addressed is Fall Prevention in the Construction Industry, with an emphasis on small cell deployment safety practices that are necessary to understand in order to keep workers safe while building and maintaining next generation wireless sites.

As a result of receiving the Harwood grant, NATE plans to host twelve 5G-Small Cell Deployment Training Courses throughout the country in 2021. NATE projects that a minimum of 336 employers and employees will receive this complimentary 5G-Small Cell Deployment Training throughout the grant period. The timing is right to facilitate this training as NATE members are on the front lines of 5G deployment and related network densification activities in the United States.

If you own or manage a business within the wireless communications infrastructure industry, NATE is here for you as a resource and an advocate. We are proud to represent companies like yours, and we look forward to providing you with education, information, training, networking, and so much more. ■

The Communications Infrastructure
Contractors Association

NLB CORP.

Water Jetting Makes It Possible

We've been helping contractors, private industry customers, and municipalities use the power of ultra-high-pressure water—up to 40,000 psi—for everything from surface preparation of concrete and metal, road construction industry pavement marking removal, and hydro demolition, as well as a host of other specialty applications where water may be a better more environmentally friendly option.

GLOBAL REACH

NLB equipment can be found in every region in the world and in myriad applications. Contractors are at the heart of NLB's customer base. Long-lasting and smooth-running equipment give them the assurance that their equipment will perform as needed and without worry. And when service is required beyond a customer's

ability, a global distributor network of knowledgeable sales and service assistance is there to keep the equipment running and a company producing. If a well-stocked distributor doesn't have what a customer needs, NLB's main warehouse can ship parts worldwide efficiently and when they're needed.

WHY WATER?

These environmental concerns are becoming more important every year as traditional methods involving sandblasting, use of chemicals and cleaning compounds, and other methods that produce unwanted air effluence and run-off are more heavily scrutinized and limited by customer and government mandate. NLB's newest technology, the E-Clutch™, is a PTO-free system that reduces water usage and lessens unit

maintenance, resulting in less water on the ground and longer cycle times in the field. Utilization of water also leaves a clean, chemical-free surface and leaves an excellent surface finish if a coating or refinishing process is necessary.

MEETING INDUSTRY NEEDS

As new building costs rise, the refurbishment of existing structures become more attractive. But, in some of the more traditional methods of construction preparation and demolition, contractors can run up against application or regulatory difficulties. We've responded by developing not only the water jetting tools for applying high pressure water, but also the means to capture the spent water and material with vacuum and other containment processes. Further, there is a greater emphasis on safe operation of equipment in these processes. NLB has responded strongly by developing a number of remote controlled, hands-free products that allow the user to effectively utilize water jetting while providing a safer environment for their workers.

A PARTNER IN YOUR SUCCESS

NLB sales engineers are more than available to walk customers through an application and provide the right water jetting solution for them. Our consultative approach assures we are going to match up the right product for a specific application. Our nationwide rental program with rent-to-own options can also allow a customer to try water jetting before making a capital equipment commitment. We have rental facilities in six states that give us a regional coverage that even allows unit delivery and pick up should a customer want it. ■

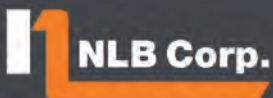

MORE WATER JETTING RENTAL EQUIPMENT THAN ANYONE ELSE.

PUMPS & ACCESSORIES AVAILABLE NATIONWIDE.

We know you often need water jetting pumps and accessories tomorrow morning – not next week – so our rental branches are stocked with a variety of well-serviced pump units and accessories near where you need us to be. NLB has seven well-established rental facilities staffed by knowledgeable personnel across North America. NLB's Sales, Service and Rental Branches are conveniently located to service your needs, please contact your nearest NLB Branch Office.

REDTEAM

Construction management is an integral part of the process that influences the time and cost put into a project. Whether in the field or in the office, each decision made requires careful analysis to ensure that each part of each phase is effectively executed. That's why RedTeam developed a construction management platform that integrates all of these required aspects to make sure your business functions smoothly, easily, and successfully.

THE REDTEAM EXPERIENCE

RedTeam: Developed by general contractors, the platform is specifically designed to improve productivity and efficiency using experience from the field. Created with the commercial general contractor in mind, there are five key aspects the platform provides to help businesses monitor upcoming projects, convert information safely in the cloud, and manage campaigns, opportunities, and interactions.

RedTeam allows businesses to consolidate all data in one secure location that is accessible through sub-locations determined by the platform's key aspects: business development, preconstruction, project management, field management, and financials. This comprehensive platform enhances

REDTEAM®

Time and speed are important [in a construction management platform] but a pace that is too fast leads people to give up and go back to what they were doing before. I liked the fact that RedTeam offers more flexibility with what they're willing to do, and the overall navigation makes sense.

~ 24HR BOOKKEEPER,
A CONSTRUCTION FINANCIAL COMPANY

collaboration and captures all metadata critical to operational efficiency that results in work done right the first time.

BUILT FROM THE GROUND UP

RedTeam was built from the ground up by CEO Michael Wright, who worked as, and still is, a licensed commercial general contractor. Michael Wright says, "I love the business of construction. Building is a core human endeavor, much of it timeless by nature, visceral hard work measured in lengths, widths, heights, and volumes. Simply put, our job is to help construction project teams work safely and effectively while delivering work they can be proud of, done right the first time. At this point, we've been developing great software for more than 20 years, but everything we're doing still feels new and exciting. As much as we've done, there is that much and more yet to do. For me, there's nothing I'd rather be working on than helping contractors succeed."

Construction is one of the largest industries in the world and depending on the size of a project, it can involve a magnitude of individuals working either in the office or in the field. Construction management ensures that the planning process flows smoothly and seamlessly and that each stakeholder is held accountable on all projects.

COMPREHENSIVE PLATFORM

With RedTeam, project teams are able to communicate and collaborate instantly online by having the ability to create and share documents, post updates, upload photos, monitor performance, and much more. The platform has every aspect of a business's construction project covered. The comprehensive platform was built with flexibility and ease of access in mind. Businesses are given the right tools to succeed from day one with the entire platform at their fingertips. ■

BUILD WITH REDTEAM

The Best Value In Construction Management

Document Control

Create and manage contract documents right from RedTeam to keep your teams aligned and your projects on track.

Build With Confidence

Arm your teams with the right information at the right time, so they can stay ahead of anything that might slow them down.

Financial Management

Extensive billing options in RedTeam allow you to include progress against a schedule of values and manage time & materials.

SULLAIR

From “small” air to “big” air, the broad range of Sullair portable air compressors is ready to tackle applications in nearly every segment. From construction and landscaping to oil and gas and industrial, the Sullair portable air compressor lineup offers a range of engine options, pressures, and flows from 185 to 1600 cfm and 100 to 500 psi.

SMALL AIR

The Sullair 185 is the workhorse of our elite mobile fleet, producing 185 cfm at 100 psi. Fully optimized and ready to hit the road, the 185 Series features a heavy-duty design and is easy to service and maintain. The 185 Series is available with multiple engine options, including Caterpillar, Perkins and Kubota. The 185 is ideal for low-pressure applications, such as demolition, clay and trench digging, sprinkler blowout, general building and road construction, demolition, and other general construction use.

MEDIUM AIR

The Sullair 375 Series includes the 375H, 400HH, and 425H models—all designed to get the job done. The 375 Series provides 100, 150, and 200 psi options with dual-pressure capabilities at the turn of a switch. Sullair also offers multiple engine options in the mid-range, including Caterpillar and Perkins. The compressors include a compact design for easy towing and maneuvering and extended runtime of up to 10 hours at full load. Aftercooled and filtered options are also available.

The Sullair 375 Series is ideal for both high- and low-pressure applications. Suitable applications can include fiber optics, well drilling, abrasive blasting, pipeline/utility/communications line work, general construction, or even plant backup air.

BIG AIR

For jobs requiring high volume air power, Sullair has you covered with multiple

options from 600–1600 cfm and 100–500 psi. Of note are the 900XHH/1150XH and 1600H portable air compressors, both powered by the Sullair 25 Series air end. These compressors provide versatile operation delivering a wide range of pressure and air flow options for your most extreme demands.

Sullair offers both electric and diesel-driven engine options in this range, including Caterpillar and Perkins diesel engines. Big air compressors are perfect for blasting, painting, drilling, industrial, pipeline, and plant backup air.

THREE PILLARS SINCE SINCE 1965

Founded in Michigan City, Indiana, in 1965, Sullair has manufactured air compressors for 55 years. Today, we continue to serve customers in nearly every corner of the globe through our extensive global distributor network. Since our founding, we’ve manufactured our compressors with three pillars in mind: reliability, durability, and performance.

Reliability. Customers who work with Sullair have found that the intangibles make all the difference—things like trust, confidence, and peace of mind. They go to work every day having full faith in their equipment, as well as the knowledge that dedicated distributors and Sullair personnel have their back every step of the way.

Durability. Bulletproof. Built to last.

However you spin it, Sullair compressors are in it for the long haul, driven by the design of the legendary air end. At jobsites all over the world—from construction to mining and more—you’ll find Sullair compressors that have stood the test of time, running consistently today like they did on day one.

Performance. Sullair is constantly innovating to improve performance. For our portable compressors, this means machines engineered with features designed to help maximize your business potential including:

- Compact designs for easier storage and maneuverability
- Increased energy efficiency to maximize run time
- Largest compressors include easy access connections to external fuel sources making long-term operation possible

Reliability, durability, and performance is a promise we keep with every machine we make. Sullair portable air compressors are in it for the long haul, and proof can be found on jobsites around the world. ■

Explore america.sullair.com/en/products/portable-diesel-air-compressors to learn more about the full line of Sullair portable air compressors.

UNLEASH THE FULL POTENTIAL OF RELIABILITY, DURABILITY AND PERFORMANCE

Sullair offers a full arsenal of elite compressors — from the workhorse 185 to the versatile 375 family and big air 1600H — helping you satisfy more customer demand.

B2W SOFTWARE—FIELD TRACKING

B2W Track allows heavy construction companies to capture field performance data more effectively, communicate it easily and accurately to other workflows, and use it to make faster, data-driven operational adjustments.

Through customized electronic field logs, B2W Track streamlines collection and reporting of field performance, including productivity, labor, materials, and equipment utilization. Data from B2W Estimate can be transferred directly to B2W Track, ensuring continuity between bidding and construction. Employees in the field also use B2W Track to communicate repair and resource requests directly to the B2W elements for equipment maintenance and scheduling.

B2W Track is a highly flexible web and mobile solution. Electronic Field logs can be customized or created by copying from a previous field log or from B2W Schedule. The B2W “Grid View” design of field logs simplifies how performance data is captured in the field on a tablet. Labor and equipment hours, quantities and overhead costs can be entered into a log all at once from a single, customizable screen.

Timely reporting is a vital advantage of B2W Track. The system can deliver reports or dashboards to any user on a defined daily, weekly, or monthly schedule. This provides insight into job performance in comparison with the estimate or plan, with drill downs to investigate trends. Reports are

customizable, so users can track unique Key Performance Indicators (KPIs) critical to their organizations. This is motivating for crews and assists leaders in the field in making data-driven decisions to adjust operations before it is too late to impact profitability.

Many companies rely on B2W Track for this type of daily field-centric reporting and use the system in conjunction with their accounting systems. Data from the electronic field logs, including payroll data, can be transferred to accounting systems, avoiding redundant data entry and the opportunity for errors and delays. ■

CRESSET CHEMICAL COMPANY

Born in the USA — The concrete construction industry knows Cresset for their advanced formulations of enviro-friendly form release agents, hand cleaners, concrete sealers, form treatments, and application equipment.

Supporting our industry — Cresset works with national and international organizations to promote and encourage the use of concrete as a good looking, durable construction material. And, believes in ensuring a successful future for the concrete workforce through partnerships with educational institutions and training.

In addition to Cresset's own concrete standards guides and training materials, Cresset has just helped develop, with AIA

and Hanley-Wood, the first accredited course on form release agents, now available via Hanley-Wood.

Protecting our environment — Cresset Chemical Company is recognized for its eco-responsible, innovative products and services, which exceed Federal EPA requirements and most meet, or exceed, the more restrictive regulations in California and OTC states like New York and New Jersey.

More cost-saving solutions — Innovation is the reason for the success of the portable Cresset RovR® 5860 Air Form Sprayer, sold complete with hose, tip and wheeled cart. "Customers tell us our RovR compressed air unit saves

time and money by applying at the right coverage, using less while consistently achieving the best form release results. They also use it to prep equipment, from mixers, trowels to trucks, or even prevent cleanup issues with concrete splatter," says Jim Renda, VP of sales.

Chosen by the best — Cresset products are widely preferred for precast and on-site pour operations and used at high-profile projects such as the new One World Trade Center (Freedom Tower in NYC) and Levi's Stadium (home of the San Francisco 49ers). ■

DOMINION EQUIPMENT PARTS

Established February 1998, family-owned and operated Dominion Equipment Parts LLC has been in business for more than 20 years.

In just two decades, Dominion has become the OEM provider for Yanmar and Morooka equipment parts, developed its own brand of high-quality rubber track replacements, and is one of the nation's leading track importers, supplying rubber tracks for 38 crawler equipment brands.

Dominion is also a distributor of undercarriage parts for top brand names including Bobcat, Caterpillar, Gehl, Kubota, Takeuchi, and Mustang, providing sprockets, rollers, and idlers. It is the solely authorized North American distributor of specialized,

compact dumpers and concrete trucks manufactured by Fiori. Its geographic range includes the 48 contiguous United States, Canada, Mexico, and South and Central America.

Dominion initially shipped nationwide from Richmond, Virginia, its original base of operations. To improve delivery times, Dominion established distribution hubs in Dallas and Cincinnati, then added Jacksonville, Albany, and Portland. Each was chosen for its logistical efficiency to give the region's customers same-day shipping with next-day delivery. Customers who choose to can also pick up their tracks or parts right from a regional warehouse, since each distribution hub also has a dedicated sales staff.

One of Dominion's greatest assets is a strong dealer network offering Dominion Rubber Tracks and associated parts, including Yanmar and Morooka. The network includes United Rentals, the largest rental agency on the continent with more than 960 locations.

Going forward, Dominion is focusing on improving its inventory and distribution capabilities even further, as well as supporting the Fiori Group machines it introduced in 2016. The compact, user-friendly vehicles increase productivity, flexibility, and operator safety in confined spaces such as narrow lanes, alleys, and tunnels. They are ideal for working in crowded city centers or in environmentally sensitive habitats and valued landscapes with restricted access. ■

GCP APPLIED TECHNOLOGIES

GCP Applied Technologies' DUCTILCRETE® engineered slab systems provide a cost-effective way to expand warehouse capacity. The floors have a thinner profile than traditional concrete slab, yet have up to 125% higher load bearing capacity. Additionally, since DUCTILCRETE® systems have far fewer joints, tenants have greater flexibility in racking and equipment layouts.

These extremely flat floors are also ideal for those using a computerized picking system or cantilevered racking systems. They can also be easily adapted to support a wide range of uses, such as food grade, manufacturing or lab grade facilities.

DUCTILCRETE advanced concrete slab technology differentiates your space—giving warehouses, distribution centers, manufacturing facilities, and data center tenants greater flexibility of their floor space—with lower maintenance costs by reducing the amounts of joints in the slab by up to 75%.

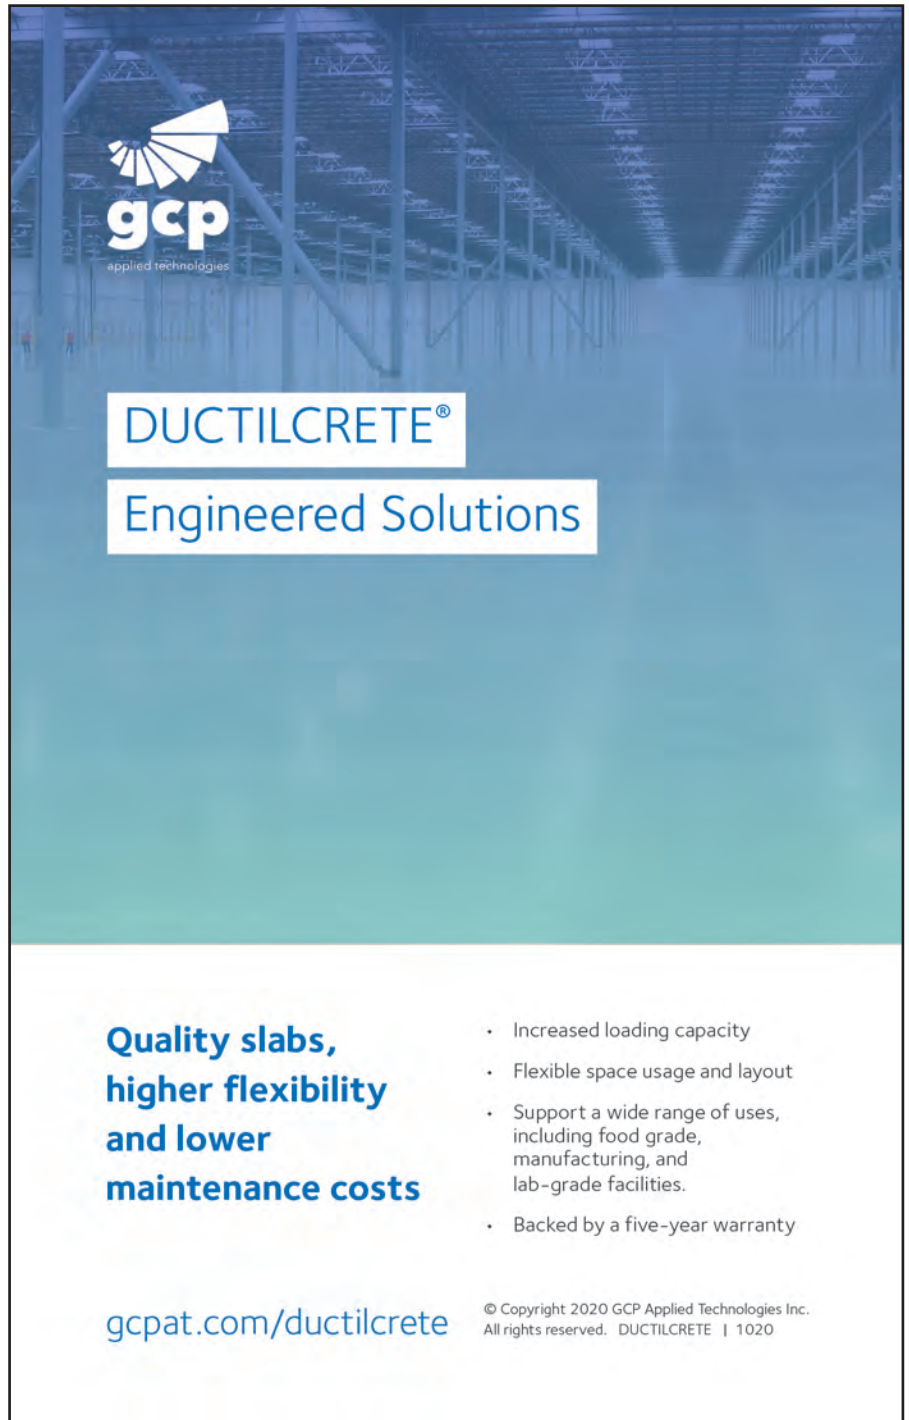

With fewer joints, DUCTILCRETE systems:

- Increase loading capacity
- Gain flexibility in space usage and layout
- Support a wide range of uses, including food grade, manufacturing, and lab-grade facilities
- Backed by a 5-year warranty from your DUCTILCRETE licensed contractor

LIND EQUIPMENT

Lind Equipment is a world leading manufacturer of portable LED lighting, hazardous location and industrial work lighting, portable power, static grounding, UV-C light, and GFCI products. With more than 70 years of experience providing products for industrial and hazardous locations, Lind Equipment is trusted on some of the toughest jobsites in the world. Lind's expertise and robust design makes it the supplier to various militaries, construction sites, oil refineries, mining companies, and general industry.

The 7-time award-winning Beacon LED Tower light has been pivotal in the world of temporary portable LED lighting. Lind Equipment launched the original Beacon LED Tower in 2017 and since

The 7-time award-winning Beacon LED Tower light is pivotal in the portable LED lighting world.

then, they have created a 3-in-1 asset allowing this tower to work as a full-brightness generator powered tower, a full-brightness electric powered tower, and as a no-glare diffused light tower. This innovation in light towers has never been seen before, an ideal unit suited for virtually any application.

During the global pandemic, Lind Equipment became aware of the dire need for a virus and bacteria disinfecting solution. As an innovation award-winning company, they did what they do best, create and innovate. Lind produced a

brand-new decontamination product within the first months of the COVID-19 pandemic, the Lind Apollo UV-C LED light. This affordable and easy-to-use solution had a high need in the market and it soon became a much sought-after solution. The Lind Apollo light has since won two awards for its outstanding achievement during this unprecedented time. ■

MAX USA CORP.

Since 1942, MAX has been recognized, worldwide, as a leading manufacturer of high-end industrial tools and office products.

MAX aims to provide customer satisfaction through uninhibited creativity based on its strict jobsite-oriented principles. Max has manufactured many items that were the first to market in Japan, including: small handheld staplers, hand tackers, and drafting machines.

More impressively, MAX has manufactured many products that were the first of their kind in the world such as: the world's 1st grapevine tying machine (1968), the world's 1st auto stapler installed in a copy machine (1985), the world's 1st battery powered

rebar tying tool (1993), and the world's 1st high pressure pneumatic nail guns (1994).

With its invention of the world's 1st battery powered rebar tying tool, MAX revolutionized rebar tying all around the world. MAX's more than 200 R&D engineers continue to improve upon its proprietary technology, which led to the invention of the TwinTier, a dual wire feeding rebar gun. TwinTier technology allows the tools to tie 4,000 ties per charge, while delivering just the right amount of wire for greater productivity and cost savings. These innovative features make TwinTiers the most innovative and efficient rebar tiers in the industry. Today, MAX manufactures a full line of rebar tying tools that can tie

between mesh up to #9 x #10 rebar. The ingenuity continues ... the latest TwinTier tool, the RB401T-E, is the industry's most ergonomic solution for backbreaking slab work. Its extended frame allows users to stand upright and tie rebar for concrete slabs. ■

Mi-T-M

Powerful Hot Water Pressure Washer Mini Trailer

You never need to sacrifice powerful cleaning for easy transportation with the Mi-T-M Hot Water Mini Trailer. Easy to tow from one job to the next, this mini trailer features a durable powder coated steel frame with a 1,000-lb axle.

The 4,000-psi belt drive hot water pressure washer is powerful enough to handle the toughest jobs at the most remote locations. Utilizing a 12-volt Beckett burner and bottom fired heat exchanger, water quickly heats up to 210-degrees, ideal for heavy-duty cleaning. The 10-gallon diesel fuel tanks allow for up to 8 hours effective hot water cleaning of oil and grease stains on parking lots, driveways, and commercial properties.

The rear locking storage area holds the insulated dual lance and trigger gun, four quick connect nozzles, and the 50-foot industrial steel wire-braided hose that are included with this trailer package.

The mini trailer features a durable powder coated steel frame and is certified by the National Association of Trailer Manufacturers (NATM), DOT-approved, and can be towed up to 65 mph. Its compact design makes it a great unit for cleaning at busy locations. Not only is it easy to tow, because of its compact size, order it with an optional adjustable trailer hitch that swings out of the way for ease of storing.

Celebrating 50 years in 2021, the Mi-T-M name is synonymous with quality and craftsmanship. ■

For more information, visit www.mitm.com, or call 800.553.9053.

The 4,000-psi belt drive hot water pressure washer is powerful enough to handle the toughest jobs at the most remote locations.

At Mi-T-M, we pride ourselves on building mighty, damn good equipment. It's what sets us apart from our competition. Our industrial line is built to withstand demanding work conditions. POSEIDON BARGE, LTD

Poseidon Barge, LTD specializes in manufacturing Sectional Barges used in the heavy construction industry to float equipment, men, or materials. Their Sectional Barges are manufactured in Berne, Indiana, and are transported via truck. They are used primarily on inland waterways where traditional deck barges cannot travel.

HULL SIZES TO FIT YOUR NEEDS

Poseidon manufactures barges with hull sizes of 4, 5, 7, and 10 ft tall. The Poseidon P10 is the largest Sectional Barge available that can be transported over the road. Measuring 44 ft long x 11 ft wide and 10 ft tall, the P10 has floated some of the largest cranes available. All Poseidon Barges have patented roll form decks that are rated for 20,000 lb/ft² of point load. That is four times the strength of traditional 1/4-inch deck plate.

PRODUCT LINE ACCESSORIES

Accessories for each specific product line are also available. Spuds, spud wells, deck cleats, rake sections, hydraulic double drum winches, Sea Bee Thruster units, and Push Boats are all part of the product line available for rent or purchase.

Poseidon Barge, LTD has a full engineer staff led by an in-house certified Naval Architect. Layouts and Basic Stability Analysis are available for each project based on the information provided by the client.

Poseidon has recently added in-house steel grit blasting and liquid spray-painting booths to better serve its customers with a premier product finish. Large enough to accommodate the P10 barge, they are some of the largest booths in the Midwestern United States. Each booth is equipped with a 25-ton crane for easy product handling.

DESIGN SERVICES AVAILABLE

Poseidon performs contract manufacturing and finishing for markets outside of the marine industry. We also can offer design services through our engineering department.

continual improvement were all reasons for pursuing this certification. The Poseidon Barge team has a strong desire for the customer to be assured that each and every barge section was built with the attention focused on these core values. ■

With a focus on quality, Poseidon Barge gains ISO Certification. High quality, repeatability, and striving towards continual improvement were all reasons for pursuing this certification.

Poseidon Barge, LTD recently received their ISO 9001:2015 certification. High quality, repeatability, and striving towards

RATTLE STICK

In 2014 Rattle Stick Concrete Tools introduced the world's first inline battery powered vibration tool that clicks into any float or walking tool and brings up the paste in 1 or 2 passes even on low slump concrete.

FEATURES: A true cordless design that works with your jobsite DeWalt, Milwaukee, or Makita 18-20 volt batteries, so there's never downtime. Patented robust vibration technology designed to last 20 years. Variable speed control is standard. Choice of Super Snake or Slump Buster power. Super Snake is for up to 6 ft floats and the Slump Buster is for big floats and everyday low slump finishing. A sleeve adapter is included for a

perfect fit into a wide range of float heads. Comes with a 1-year warranty.

BENEFITS: Bring up cream twice as fast, perfect stamped concrete impressions, cut hard trowel time in half, eliminate surface bleed, and never spray water on top again.

WHERE TO BUY: Call to find a dealer near you or buy direct 916.472.6250. ■

SUNFLOWER BOAT & BARGE

Sunflower Boat & Barge of Dubuque, Iowa, is a one-stop-shop for contractors working over the water. Sunflower maintains an extensive fleet of marine construction equipment and related accessories available for lease. Sunflower expanded its fleet in 2018 by adding a new construction crane barge built in house, and two new 600 hp truckable tugboats. Planned expansion for 2019 includes two more new construction crane barges and three additional 600 hp truckable tugboats.

The first of the new crane barges measures in at 120 ft x 54 ft, while the second will be 120 ft x 40 ft. Designed specifically for floating large cranes, these new barges will provide optimal crane platforms for bridge building

contractors or anyone else needing large and strong platforms.

Sunflower Boat & Barge's existing fleet includes numerous inland river crane barges, material barges, and deck/spud barges of various sizes. Sunflower also leases portable sectional barges, available in four different sizes (3 ft, 4 ft, 5 ft, and 7 ft hull depths), allowing for configuration of a work platform that fits each customer's unique needs and also allowing access to nearly every inland water. Sectional barge platforms can be designed to support projects ranging from floating plant operations for painting and drilling jobs all the way up to configurations designed to handle heavy cranes.

In addition to barges, Sunflower has traditional tugboats ranging in size from 300 hp to 1,800 hp, as well as truckable tugboats from 300 hp to 600 hp.

Hydraulic dredges? Yep, they have them too, again, in a range of sizes to fit the requirements of your project. Dredges vary from 8 inches up to a new in 2015 Ellicott 1270. Crawler cranes ranging from 45 ton to 450 ton are also available for lease and can be loaded to barges from their facility in Dubuque, Iowa. Additional equipment available includes spuds, spudwells, and spud winches, as well as long reach excavators, dredge pipe, and heavy rigging and lifting gear. ■

For more information, visit
www.sunflowerboatandbarge.com.

Available for Lease:

- Sectional Barges
- Spud Barges from 75x32 to 195x70
- Hydraulic Dredges
- Truckable Tugboats from 300 – 600 hp
- Traditional Tugboats
- Support Equipment

SUPERIOR TIRE & RUBBER CORP.

Surface protection for steel tracked construction equipment is a deal-breaker for most contractors today, and for good reason. Many excavators come from the factory with bolt-to-link "roadliner" rubber pads for this reason; however, rubber didn't seem to be performing very well and Superior Tire noticed it. "We see it at almost every jobsite we go to—chunks of rubber, chewed up pads, and an unhappy contractor that just bought the pads a few hundred hours ago. There's a far better solution," says Kevin Rotondelli, national sales manager at Superior Tire. Superior Tire looked to polyurethane, a far stronger pad material, to solve the durability issue and created the CUSHOTRAC® ReDDi™. Confident in its performance, they gave it a work-life guarantee of 2 years or 2,000 hours—whichever comes first.

That's not all they set out to solve either. Kevin stated that contractors were being left waiting weeks and even months in some cases due to overseas shipping issues. "We manufacture right here in Pennsylvania and we designed the CUSHOTRAC® ReDDi in a way that allows us to ship off the shelf in 72 hours or less, and we guarantee that availability as well," he says. "You don't have to over-pay for poor product and you don't have to wait forever—you can buy a better made, American product, faster and cheaper."

Superior Tire & Rubber Corp. has been designing and manufacturing rubber and polyurethane track pads for more than 40 years. Their industry leading CUSHOTRAC® Track Pads are used to protect existing infrastructure from damage caused by the steel grouser shoes typically found on crawler type construction equipment. Kevin Rotondelli and his team work alongside contractors, operators, and mechanics, in person and on jobsites to understand the capabilities and problems they face.

Superior Tire & Rubber Corp. was founded in 1964 in Warren, Pennsylvania. They're one of the few polyurethane and rubber manufacturers that operate entirely in the United States. Kevin states in closing, "Being an American Made company is important to us; it's something that we're proud of. There are a lot of companies out there outsourcing their manufacturing to foreign countries for ten cents on the dollar—but you get what you pay for."

Superior Tire is also one of the only rubber and polyurethane tire and wheel manufacturers in the US to be certified to ISO 9001:2015 for Quality Management. ■

ADVANCED CONCRETE SCREEDS

Advanced Concrete Screeds, LLC manufactures the famous Black Beauty and Silver Beauty power vibratory concrete screeds. Our tools are designed and built to enable concrete contractors to achieve exceptionally flat concrete floors. Both of our designs consolidate as they screed. Achieving excellent flatness and consolidation of the concrete in the initial screeding step results in easier finishing, less labor cost, flatter floors, and better concrete density. Our Equilateral Triangle Bars stay straight. They do not warp, bend, or twist through years of use. Screed bars are available in lengths up to 20 ft. The Black Beauty and Silver Beauty power units easily screed 2-inch to 9-inch slump concrete. These rugged USA-made tools are designed to withstand years of heavy-duty use with little to no maintenance required. Our focus is on building the best power vibratory screed tools available for the professional concrete contractors and enabling them to achieve strong flat concrete floors. ■

ALPINE ROCKWHEEL

For more than 50 years, Alpine has been a trusted supplier of equipment for the construction, underground, and environmental sectors. We are specialists in hydraulic drum cutter attachments with our premier ROCKWHEEL product line, allowing for rapid and precise removal of rock and concrete, and filling the niche between bucket excavation and heavy hammers. We also offer the most comprehensive line of excavator mounted SOIL MIXING attachments for soil remediation, stabilization, and solidification activities. New to our product line are the Hartl ROCKCRUSHER and ROCKSCREENER Buckets for on-site material processing. If an off-the-shelf tool won't do the trick, job-specific customization is always an option. Alpine's experienced team will always strive to identify the optimum solution for your project, and is always available for technical support, service, and parts. All Alpine products are available on a rental basis with purchase option. ■

ANTRAQUIP CORPORATION

Antraquip Corporation is the leading designer, manufacturer, and supplier of hydraulic rock grinders (roadheader attachments), carbide and saws, and soil remediation equipment. The newest addition to the Antraquip product line are diamond tipped rock saw attachments for excavators designed to cut hard rock and reinforced concrete for specialty applications. Antraquip's rock and concrete grinders are suitable for trenching, controlled demolition, scaling, soil remediation, tunneling, underwater cutting, and general rock excavation.

- Numerous models available for excavators ranging from 1-180 tons
- Choice of cutter head styles to suit the application
- AQ line equipped with a high-torque, low-speed hydraulic motor with rugged gearing and symmetrically aligned cutter bit patterns insures maximum productivity

Antraquip machines are being used all over the world in a variety of civil engineering and mining projects. ■

BUFFALO TURBINE

Buffalo Turbine manufactures dust and odor control equipment. The self-contained, Diesel Dust Controller offers many differences from most of the other dust control equipment on the market. Powering the Buffalo Turbine Diesel Dust and Odor Controller is a Tier 4 compliant 26.5 hp Kohler 3-cylinder diesel engine. Built for industrial and commercial use, the diesel engine features liquid cooling, dual air cleaners, and both heat and oil safety shut offs. Featuring a compact, easily maneuverable three-wheel off-highway trailer and common 3/4" connection which can adapt to most standard municipal water supply for fast jobsite set up.

In addition to the diesel dust controller, the **NEW Trident** model is now available. Powering the Trident is a 74 hp diesel engine to go along with three separate turbines for 3X the coverage. The Trident is also self-contained allowing for maneuverability around jobsites and to and from different job locations. ■

CARNIE CAP

Safer impalement protection and ease of installation are hallmarks of the Carnie Cap impalement protection system. They are national OSHA compliant and CAL-OSHA approved. The caps are easy to use and only two caps are needed per 8 feet of rebar (3 per 8 feet in California). They're incredibly cost effective; instead of having to purchase a cap for each rebar, you can use far fewer pieces and still get better protection. They're rarely knocked off or lost, so neither money nor precious time searching your jobsite for lost caps is wasted. Plus, these caps are reusable. Carnie Caps are made in the USA and ship in boxes of 100 from Moline, Illinois, Monday through Friday. Ask about quantity specials. Check the website for additional information and safety articles. ■

Innovative rebar impalement protection.

CIMLINE

At Cimline, we design and manufacture equipment to preserve roadways throughout the world. With a drive for performance and innovation, Cimline continues to offer cutting edge technology through its worldwide network of distributors. We are headquartered in Minneapolis, Minnesota, with manufacturing plants in Minnesota and Mississippi. Cimline innovative engineering teams are continually developing and delivering pavement preservation products that transform the pavement industry. We work closely with our customers to gain invaluable insight to help develop products to meet and exceed their pavement need.

Meet the MA4 Longitudinal Joint Sealer, the first and only towable VRAM (Void Reducing Asphalt Membrane) applicator that does not require a CDL. ■

Innovation in Preservation

about its pavement maintenance products.

INNOVATION IN PRESERVATION
MA4 Longitudinal Joint Sealing

- First and only towable VRAM (Void Reducing Asphalt Membrane) applicator that does not require a CDL (Commercial Driver's License)
- Saves you money by enabling you to take control of longitudinal joint sealing
- Faster and simpler logistics on every project when you control this step of the paving process
- Control the pace. Only seal what is needed for the day so motorists are not exposed to slick centerlines

Visit cimline.com to learn more about
our pavement maintenance products.

CLEANFIX

Off-road machinery is subjected to dust and debris that, in just a few hours, can bog down the equipment and render it less productive. Fuel consumption and downtime will increase, and the bottom line of any construction operation will be negatively impacted. By eliminating the need for operators to stop the equipment to clean out plugged radiators, the installation of a Cleanfix reversible fan will help maximize the machine's productivity.

While delivering engine cooling equal to the machine's standard fan, the Cleanfix replacement fan additionally provides powerful cleanout of dust and debris by reversing the airflow. The innovative Cleanfix design, by which the blades rotate through the cross position, ensures that not just the grille is cleaned off, but more importantly the cooler also. Other "reversing fan" systems rely on changing the rotational direction of the fan while the blade profile remains the same. This results in low pressure and highly turbulent reverse flow conditions. ■

FUMOTO USA

The Fumoto Engine Oil Drain Valve is the original engine oil drain valve. More than 40 years ago, founder Mr. Yamamoto invented the Fumoto Engine Oil Drain Valve, forever changing the messy task of changing oil into a "simply effortless" one with a simple flip of a lever. Since 1976, over 13 million valves have been sold worldwide to fleets, OEMs, DIY mechanics, auto shops, and more.

Fumoto USA is the proud primary importer and distributor of Fumoto Engine Oil Drain Valves in the United States. Named after its majority shareholder and inventor of the Fumoto Engine Oil Drain Valve in Japan (Fumoto Giken Co., Ltd. – fumotogiken.co.jp), Fumoto USA is a closely held corporation with the majority of its shareholders being the inventor and ISO-certified manufacturer of the Fumoto Engine Oil Drain Valve. This close relationship allows Fumoto USA to quickly respond to customer requests for new products and designs. Fumoto USA strives to be unmatched in quality, reputation, and service. ■

INSITE SOFTWARE

InSite Elevation is a PDF & CAD earthwork take-off and GPS modeling software solution for estimators who need to save time and money. Quickly and accurately calculate cut and fill, stripping, strata quantities, paving and concrete materials, topsoil re-spread, areas, lengths, trench excavation, and backfill. The software also includes GPS machine control systems surface export and generates construction staking data. Customer success is our top priority. The company offers live training, exceptional technical support, and continuous new feature development. ■

Designed to handle tough
sitework takeoffs with ease.

L.B. WHITE COMPANY

Heaters from L.B. White are engineered to meet the unique requirements of jobsites at every phase of construction. From early stages when electrical is not easy to access, to finishing steps when ducted air is convenient, and countless scenarios in between—there's an L.B. White heater for the job.

From headquarters in Wisconsin, L.B. White offers more than 65 years of leadership in heat manufacturing and engineering. From fully welding heat exchangers to test firing every heater before it ships, safety and quality practices have set L.B. White products apart since 1952. Heaters are backed by an industry-leading manufacturer's warranty. An onsite Tech Support team, with more than 15 years of hands-on heat engineering experience, serves as a year-round resource, too. ■

MBW INC.

MBW, Inc. has been manufacturing one of the construction industry's most interesting lines of small compaction and concrete equipment. Located in Slinger, Wisconsin, production began more than 50 years ago with its introduction of a lower maintenance vibratory plate compactor. MBW does not simply duplicate designs developed by others. MBW begins each new engineering project with the assumption that significant progress can be made in terms of improved productivity, reduced maintenance, longer life, enhanced user safety, and lower long-term cost of ownership. MBW backs its products with a 1-year warranty.

Today, the company's product line encompasses a variety of soil compaction products including single direction vibratory plates, small and large reversible vibratory plates, gas and air rammers, skid steer roller attachments, and small and large excavator wheel attachments. The concrete side includes a vibratory wet screed with bar sizes from 4 ft to 24 ft, truss screed, three sizes of walk-behind power trowels and three sizes of ride-on power trowels, concrete power buggy's, mortar mixers, and concrete sprayers. ■

REEF INDUSTRIES

For more than 60 years, Reef Industries has been manufacturing and fabricating reinforced film laminates and composites. Reef Industries specializes in custom plastic laminates that safeguard and prolong the service life of customers' investments. Products range from covers that protect equipment during outdoor storage to underground marking tape that ensures buried utilities are protected from accidental dig-ins. Reef Industries provides customers with dependable and proven high-quality materials for long-term performance.

Each year, countless building owners suffer the problems associated with material and systems failures due to moisture. Reef Industries' Griffolyn® vapor barriers and vapor retarders can prevent water vapor from causing poor insulation performance, structural damage, and other moisture-related problems. The main reason for retarding the transmission of water vapor through the building envelope is to prevent water vapor from condensing within the building structure cavities. The Griffolyn polyethylene vapor retarder system's low permeance keeps moisture from infiltrating the building envelope. ■

TALBERT MANUFACTURING

Talbert Manufacturing has been building world-class heavy-haul and specialized trailers to rigorous customer specifications for more than 80 years. The company offers complete lines of heavy-haul trailers and specialized transportation equipment for the commercial, industrial, military, and government sectors. Its trailers and equipment are used in applications as diverse as renewable energy, aerospace, heavy construction, in-plant material handling, manufacturing and processing systems and much more.

Talbert offers a wide variety of base model trailers, such as 10- to 30-ton tag-a-longs, hydraulic tails, oilfield, heavy hauls, and traveling axles. The company has also built thousands of custom units and prides itself not only on the relationships that it has nurtured along the way, but also on the trailers' durability and longevity. That is why 92 percent of Talbert Trailers built since 1985 are still on the road today. ■

Are the costs of missing tools and equipment hounding you?

By increasing inventory
visibility and employee
accountability, you can
significantly reduce the
loss, theft and hoarding
of valuable assets that
affect your bottom line.

In business since 1985,
ToolHound has helped many organizations
save significant time and money through
effective tool and equipment control.

Put ToolHound to work for you!
Visit www.toolhound.com
or call 800-387-8665 ext 2.
