

PRODUCTS AND SERVICES GUIDE

The BILCO Company

Thermally Broken Roof Hatch

The BILCO Company's Thermally Broken Roof Hatch sets a new standard for energy efficient rooftop access. The product features an innovative frame and cover design that minimizes heat transfer between interior and exterior surfaces to resist harmful condensation and aluminum construction for corrosion resistance. Thermally Broken Roof Hatches are designed with 3" of polyisocyanurate insulation for superior energy efficiency and an industry high R-value of 20.3, which is in line with modern roofing systems. A special cover and curb mounted EPDM gasket system minimizes air infiltration for optimum wind resistance. Products are available in a number of standard sizes to meet any access requirement.

COMPANY NOTABLES

The BILCO Company has served the building industry since 1926. During these years it has built a reputation among architects, engineers, specifiers, and the construction trades for dependability and for products that are unequalled in design and workmanship. BILCO, a wholly owned subsidiary of AmesburyTruth, which is a division of Tyman PLC, has been a pioneer in the development of specialty access

products for commercial and residential construction markets.

SPECIALTY ACCESS PRODUCTS

The BILCO Company continues to be the industry leader in the design and manufacture of specialty access products. In order to better serve its customers, BILCO has added manufacturing facilities and strategic distribution throughout the world, along with establishing an extensive international network of factory-trained representatives. These representatives, combined with BILCO's highly skilled and dedicated personnel, ensure a level of customer service that is unequalled in the industry. As the leader in design innovation, many of BILCO's products incorporate features for which numerous U.S. and international patents have been issued. Years of engineering experience, coupled with manufacturing facilities utilizing the most modern equipment available, allows BILCO to design and fabricate access products for virtually every application.

The BILCO Company is committed to producing access products that are unequalled in quality, design, and workmanship. BILCO products are fabricated to consistently high-quality standards to ensure complete customer satisfaction. As part of its commitment, BILCO has implemented a LEAN manufacturing quality and continuous improvement system that has achieved ISO 9001 certification. ■

Energy Efficiency. Guaranteed.

We set a new standard for energy efficient rooftop access with our Thermally Broken Roof Hatch. The product features an innovative frame and cover design that minimizes heat transfer between interior and exterior surfaces to resist harmful condensation and aluminum construction for corrosion resistance. These hatches are designed with 3" of polyisocyanurate insulation for superior energy efficiency and an industry high R-value of 20.3, in line with modern roofing systems.

Features and Benefits:

- Special EPDM gasketing with enhanced weather and wind resistance
- Meets LEED® standards for recycled content
- High solar reflective index (SRI)
- Available in a number of standard sizes to meet any access requirement

Experience. Innovation.

BN Products-USA

Striving to supply Quality Products Engineered with Intelligence and Imagination, BN Products-USA™ has developed complete product lines to outfit the professional concrete contractor. With our end-to-end catalog of tools to bend, cut, and secure rebar, we support the needs of the construction pro with numerous innovative tools and supplies for the jobsite. In addition, BN Products-USA is committed to helping our distributors and their customers grow their bottom line by providing high-quality tools at competitive prices, based on our strong values of integrity and superior customer service.

BN Products-USA, LLC has served the construction wholesale market for more than four decades, with a primary focus on concrete construction products and equipment.

Our product lines have also grown to include portable jobsite generators—both conventional gas-powered and inverter units, award-winning safety tools for building and tearing down concrete forms, power mixers and mixing stations, pneumatic nail guns, concrete anchors, and drywall sanders. These product lines supplement the combination

of manual and power tools designed to provide contractors with the best options available for cutting, bending and tying rebar.

REBAR CUTTING & BENDING TOOLS

Electric-hydraulic rebar shears have proven to be the most cost-effective and efficient tools for safely and quickly cutting almost all rebar sizes. The DC-20WH is the most popular rebar cutter sold in the USA, due to continuous enhancement since its debut in 1972, leading to more power, lighter weight, and extreme durability. Our product line includes nine unique, portable hydraulic cutting tools, each optimized for cutting different rebar sizes ranging from #5 (16mm) to #10 (32mm) Grade 60 rebar. Additionally, our cutters include both corded and battery-powered models for almost any application.

Some contractors prefer the innovative Cutting Edge Saw™, available in cordless and corded models to cut rebar up to size #8 (25mm), featuring a protective blade shroud and adjustable handles that allow for cutting in tight spaces and flush surface-cutting. The cuts are so clean using this cold-cutting saw, that this tool

is commonly used to cut threaded rod because you'll be able to freely spin a nut over the cut end of the rod.

Bending rebar requires specialized equipment in shops and on the jobsite; BN Products-USA offers an array of quality, heavy-duty electro-mechanical bending machines. The engineering of each of our rebar bender models are uniquely designed for varying rebar capacities. Options include bending multiple rods simultaneously, and some models are equipped with pre-set angle locks and foot-pedal controls. Moreover, we provide professional tools at a low price—expanding the market for smaller contractors at a price point to afford the best tools for the job. We also offer the venerable MBC-16B1 manual cutter/bender combination tool—a best seller that quickly completes smaller jobs.

REBAR TYING TOOLS

BN Products released its next-gen BNT-X Series rebar tiers in 2019, after success with the original BNT Series tiers. This series offers professional-quality tying with three sizes to choose from, at an affordable price that beats our competition, matching quality and durability. A full set of accessories are available—from extension arms for tying floor mats to holsters, with replacement wire options designed for our machines, including poly-coated and Made-in-USA wire products. ■

Express Blower, Inc.

The Inventor. The Innovator. The Standard.

Express Blower, Inc. leads the pneumatic blower truck market with innovation, state-of-the-art systems, and practical experience, resulting in a greater number of large-size machines working in the field today than any other manufacturer. The mantra, "We are selling a business, not just a piece of equipment," is ingrained in Express Blower's culture and is reflected in the equipment and customer service provided to its customers.

PRODUCTIVITY AND EFFICIENCY CONTRIBUTE TO THE BOTTOM LINE

With Express Blower machines, reduce the number of workers required for labor intensive, lower margin jobs such as mulching. The rest of the crew is now available to do more profitable work, such as irrigation or landscape construction. EB equipment also helps take the seasonal nature out of many businesses' workflow. While spring may be the busy season for landscape mulching, erosion control projects may pick up in autumn with work sometimes continuing throughout winter. Then

there is year-round green roof material installation and playground safety surface "refreshing" before and throughout the school year.

Because of the machine's production capabilities, you can naturally increase the number of jobs completed in a day while increasing your opportunity for repeat business by delivering a quick, consistent, professional service.

THE EB-60HO HIGH OUTPUT MODEL

Did we mention innovation? The newest member of the EB equipment family is the High Output (HO) model designed around the tried-and-true EB-60 model. The EB-60HO is similar in blowing capabilities to our MD models and is the most powerful of our PTO configured machines. Lighter weight than any MD model and with greater capacity than a TM-45MD, the EB-60HO gives you better payload which means more money in your pocket! This machine also has better ground clearance than the standard EB-60, has no auxiliary engine for easier maintenance, and is available with our new 250-gallon water system.

THE DISTINCTIVE TR-HD

The model TR-HD is a compact trailered unit with all the power of the Express Blower full-size TM-45HD and TM-70HD models. Aggregates and rooftop soil mixes can be blown vertically 20 stories or more depending upon product and project parameters. The TR-HD's relatively small footprint makes it easy to maneuver in congested areas; perfect for urban green roofs or any project where there are continuous onsite loading capabilities. THE TR-HD: COMPACT. HEAVY DUTY. ROCK SOLID. See www.expressblower.com/products for a complete listing of all available models.

DYNAMIC USED EQUIPMENT MARKET

Express Blower machines are built to last, and this longevity has resulted in a vigorous used equipment market. Recognizing that building new machines plus refurbishing used machines could strain factory and personnel capacity, EB partnered with Conveyor Application Systems, LLC (CAS) to assist in the refurbishment and sale of used EB machines. CAS is a Rexius Forest By-Products company which is the inventor of EB machines and the creator of Express Blower, Inc. Their knowledge and experience are a great asset for this market. While customers speak directly with the EB sales team when purchasing new or used equipment, CAS is responsible for securing the used equipment inventory and refurbishing the machines to get them in sellable condition. See www.usedblowertrucks.com for current inventory. ■

Performance may vary depending on type and quality of material used, operator proficiency, and jobsite setup, requirements, and specifications. Express Blower, Terraseeding, and the Express Blower design logo are trademarks of Express Blower, Inc.

YOU DON'T NEED MORE PEOPLE... YOU NEED MORE MACHINE

THE EXPRESS BLOWER® TR-HD... COMPACT. HEAVY DUTY. ROCK SOLID.

With all the power of the full size TM-45HD or TM-70HD Express Blower® machines, this compact trailer version was designed for use in congested areas where you have access to continuous on-site loading. But don't let its original purpose limit you! Tow with a one-ton truck to any green roof, erosion control, or construction site for the blown-in installation of aggregates, soil blends, composts, mulches - go vertical more than 20 stories or distances up to 2,000 feet.

Express Blower® Machine Models:

- EB-45 •EB-60
- EB-60HD •EB-110

Isuzu F-Series

Three Models, Two Classes, One Smart Choice

Do you need more power and payload to maximize your trucks' productivity? But you need excellent maneuverability and visibility for navigating tight urban spaces? And you need it all with a low cost of ownership? There is no need to compromise. Isuzu introduced its new F-Series trucks, now available in both Class 6 and, new for 2022, Class 7 models.

SMOOTH POWER

Every 2022 Isuzu F-Series model is equipped with the most powerful version of the Cummins B6.7 Efficiency Series engine. Under constant improvement for nearly 40 years, well over 12 million Cummins B-series engines have been sold. This legendary 6.7-L, inline six-cylinder diesel powerplant produces 260 hp and 660 lb-ft of torque.

The Isuzu low cab forward design allows you to see objects much closer to the front of the truck than any conventional cab. With new standard LED headlamps, 2022 Isuzu F-Series trucks give you greater visibility than ever.

With the driver-friendly Isuzu Hexapod cab with its multiple storage spaces, work surfaces, and standard amenities, Isuzu F-Series trucks allow you to be as comfortable as you are productive.

THREE MODELS IN TWO CLASSES

| | |
|---------------------------|---|
| Class 6 FTR | 25,950-lb GVWR and 19,000-lb rear GAWR |
| Class 6 FVR Derate | 25,950-lb GVWR and 21,000-lb rear GAWRw |
| Class 7 FVR | 33,000-lb GVWR and 21,000-lb rear GAWR |

All models:

- Available in eight wheelbases, from 152 to 248 inches, accommodating bodies from 14 to 30 ft in length
- Can be equipped with air suspension
- Offer a 50- or 100-gallon fuel tank
- Come in a Standard Cab configuration with three-across seating

All F-Series trucks feature the Isuzu low cab forward (LCF) design perfected over more than 60 years. The LCF design's longer cab-to-axle (CA) dimension provides Isuzu F-Series trucks with more cargo capacity versus conventional cab competitors with a comparable wheelbase. This gives you more flexibility in body application choices to accommodate heavier or bulkier cargo loads.

The Cummins B6.7 is mated to a smooth-shifting automatic 6-speed Allison Rugged Duty Series transmission (2550 Series with park pawl for FTR, 2500 Series with no park pawl for FVR). Allison RDS transmissions are noted for their seamless transfer of power from the engine to the asphalt. Together, the robust Cummins/Allison powertrain provides an optimum blend of power, fuel economy, and reliability.

DESIGNED FOR PRODUCTIVITY

As with all Isuzu trucks, the FTR and FVR offer superb maneuverability, visibility, and comfort. Drivers will appreciate the 50-degree inner wheel cut that gives the Isuzu F-Series class-leading turning diameters between 43.7 ft (for 152-inch wheelbase models) and 65 ft (for models with the 248-inch wheelbase).

THE ISUZU DIFFERENCE

Like all Isuzu trucks, the new F-Series range offers such peace-of-mind features as:

- Outstanding basic limited warranty protection
- 24/7 roadside assistance for the length of your warranty
- Genuine Isuzu OEM parts, and also Isuzu FleetValue parts, priced to compete with aftermarket parts but engineered to meet Isuzu's stringent specifications

GET MORE INFO

Isuzu F-Series trucks are sold and serviced by Isuzu's network of nearly 300 dealerships across all 50 states.

Isuzu Commercial Truck of America invites you to visit www.isuzucv.com or contact your nearest Isuzu dealership to discover for yourself why the new Isuzu F-Series trucks—with three models in two classes—are the one smart choice for you. ■

Isuzu Diesel

Caring People Providing The Power Behind It All

In a world of uncertainty, Isuzu is here to support your North American power requirements, from agricultural, industrial, medical and construction, by providing environmentally responsible and critical power products for your specific applications.

Isuzu's newest available power when needed, has become even more important today, with unpredictable hurricanes, tornadoes, and storms in all parts of the United States. Isuzu Open GenSet Power Units can help put standby power solutions into your customers hands faster for multiple generator applications. These Tier 4 Certified, 4J Series 3.0L, 4 Cylinder, 70.8 kW (95 HP) @ 1800 RPM and 4H Series 5.2L, 4 Cylinder, 127.5 kW (171 HP) @ 1800 RPM open GenSet Power Units provide pre-tested and over 90% validated ready power. This can save time, money, and resources, for generator- and alternator-end manufactures. Isuzu's designs are versatile with an SCR over-the-flywheel and built with common components for multiple configuration options. Including adjustable skid base cross members for bolt-on flexibility. Plus, these units offer a 5 year/5000 hour Warranty to keep you running longer.

4J Series 3.0L, 4 Cylinder, 70.8 kW (95 HP)

4H Series 5.2L, 4 Cylinder, 127.5 kW (171 HP)

ALTERNATIVE FUEL POWER UNITS AND DUAL-FUEL POWER UNITS

In a world of clean fuel requirements, the Isuzu Alternative Fuel Engines and Power Units use natural gas or propane and can be equipped with a Dual-Fuel System to simply reconfigure the fuel source and eliminate downtime. These Dual-Fuel Power Units are being recognized as industry leading for their innovative ability to change from one fuel to another, while on location, without shutting down an entire job site to change an available fuel source. For example, in Louisiana where higher levels of hurricanes occur and natural gas gets interrupted. These Dual-Fuel Power Units can be switched off and restarted with a flip of a switch to easily change to a readily available propane tank to keep your project or emergency power running with a clean available fuel source.

ISUZU POWER PRODUCTS, BUILT TO LAST

Isuzu has proven its power solutions to be Reliable, Eco-friendly, Durable, and Technologically Advanced. With Tier 4 and Stage V Engines and Power

Units, branded under Isuzu REDTech™, provide quiet, low maintenance and fuel efficient power for existing and new applications. From 6.7kW to 397kW, these Engines and Power Units use the latest after treatment DOC or DOC+SCR, with vertical or horizontal SCR for design flexibility. Every Isuzu Engine or Power Unit is precision tuned for its highest efficiency, while reducing oil and fuel consumption. A long-lasting and robust fuel injection system incorporates excellent fuel economy and extended service life. Stringent criteria to lower NVH (noise, vibration, harshness) are engineered into every Isuzu product. Each application is designed to meet customer specifications and is engineering validated for each environment. Isuzu REDTech™ Engines and Power Units with reliable performance, durability, and high thermal efficiency help reduce downtime. All of Isuzu products are supported by Genuine Isuzu Parts, a Distributor and Dealer network, along with dedicated professionals disciplined in engineering, manufacturing, and management to ensure the right customer power solutions for their applications. ■

Mi-T-M

New Series of Generators Designed for Maximum Power

Mi-T-M 8000-watt inverter

Mi-T-M 3500-watt inverter

Mi-T-M 6500-watt ChoreMaster Generator

No matter if it's a general contract job or a large construction project, contractors want everything to run smoothly—as smooth as the hum of a Mi-T-M generator.

TRENDS INSPIRE INNOVATION

Noise restrictions and emission standards are more prominent in the construction industry than ever before. These trends have influenced the development of Mi-T-M's portable generator line and have led to the recent launch of the Mi-T-M inverter and ChoreMaster generators equipped with carbon monoxide (CO) detectors and auto shutdown.

Designed to be quiet and powerful, the new Mi-T-M inverters range from 2000 up to 80000 watts and are powered by Mi-T-M OHV engines. They provide commercial AC power for sensitive electronic equipment and are perfect for charging and powering equipment on jobsites. A parallel port box accessory allows contractors to connect two inverters together to utilize the power of both units at once, improving a job's efficiency—a priority when completing time sensitive contracts.

The hand-carry 2000 and 2500-watt inverters are lightweight and feature GFCI protected receptacles. The 3500-watt model has an open frame design and takes accessibility to the next level while providing clean power. The 4000 and 8000-watt inverters include electric start, as well as handles and wheels

for portability. Their lighted digital displays show voltage, hertz, run hours, and total hours. All models include

1-year alternator and 3-year Mi-T-M engine warranties.

Mi-T-M engines have an overhead valve design and feature low oil shutdown, easy start, and are backed by Mi-T-M replacement parts. These powerful engines are also featured in the new ChoreMaster Series of generators.

The ChoreMaster generators range from 4000 to 10000-watts and are engineered to provide maximum power not only for contractors but for commercial businesses and anyone who needs a dependable power source. Each comes with a built-in CO detector system with auto shutdown if CO levels become unsafe. They offer multiple voltage capabilities, include idle control, USDA/USFS-approved spark arrestors, and handles and wheels for portability. The wraparound powder coated steel frames stand up to tough jobsite environments and each model includes 1-year alternator and 3-year engine warranties.

BUILT TO PERFORM

Time is money and contractors look for equipment that can help complete projects quickly and efficiently. Mi-T-M portable generators are designed with contractors in mind, provide consistent and reliable power for a multitude of tools and can be moved from one job to the next effortlessly. They're built to perform and built to last.

Mi-T-M Corporation is an employee owned company located in Peosta, Iowa. For more than 50 years, Mi-T-M has manufactured high quality and dependable industrial equipment. ■

Solaris Attachments

Why you should add Solaris to your bucket list

Premium excavator buckets

Specialty buckets

At Solaris Attachments, we offer you 100% US-Made Buckets, made with North American Steel. Our buckets are made with pride and care in North Carolina. We offer buckets for the smallest excavator, up to the largest excavators on the planet.

We offer three categories of digging buckets:

- Standard Duty
- Heavy Duty
- Extreme Duty

There are hundreds of excavator bucket manufacturers around the world, each advertising that they have the best excavator bucket to offer you. So, how do you make the right choice for an excavator bucket? In short—you get what you pay for. We offer you top quality at a reasonable price. We back up our buckets with a 1-year warranty and the best customer service on the planet.

The questions you need to ask yourself before you call us are:

- What do you need to accomplish with your excavator bucket?
- Does your excavator offer the breakout force necessary for the size bucket you want and the load it will carry?
- Do you need a digging bucket, ditching bucket or grading bucket?
- What job does it need to perform?
- What is your budget for an excavator bucket?

With excavators, one can get a whole lot more creative as far as buckets, grapples and other attachments are concerned, that's why we offer a large variety of different buckets and attachments for all size excavators, including grading buckets, cable buckets, screening buckets, trapezoidal buckets, and the list goes on...

It's important to remember that each bucket and grapple can be coupled with a quick coupler, a tiltrotator or anything else to add more functionality and efficiency to your existing bucket or grapple. If you're not sure what is right for you, visit our Solution Center and let us know what problems you are confronting on your project, and we will offer you the right solution! Don't forget about our financing options whether you are looking for purchase financing or leasing equipment, we can take care of you!

Due to a well-staffed production line and expert management, we offer reasonable lead times.

Among the many buckets we carry, we offer:

- Digging (Tooth) Buckets
- Cleanout (Ditching) Buckets
- Grading Buckets
- V-Buckets (Trapezoid)
- Cribbing Buckets (trenching)
- Skeleton Buckets
- Power-Tilt Buckets (hydraulic tilt) ■

*For more information, visit
www.solarisattachments.com
or call 888.754.3609.*

*Contractors and dealers should also keep in mind that excavator attachments often take longer to prepare and deliver than skid steer attachments. While a skid steer offers a universal quick-attach plate, every make and model of excavator has a different configuration at the end of the stick or boom. Therefore, it takes time to prepare a hook up on an excavator attachment that will fit your configuration just right. We will usually ask you what type of quick coupler your excavator may have. If you have a pin-grabber instead of a quick-coupler on your excavator, we will ask you for measurements of your pin diameters, distance between your pins, and a couple of other measurements. **So, please make sure to allow for extra time when ordering an excavator attachment.***

Super Products LLC

Vacuum Trucks

Super Products LLC, an Alamo Group Company, is a prominent manufacturer of vacuum trucks. Super Products is at the cutting edge of vacuum truck development featuring advanced technology and customized solutions driven by customer needs. Additionally, the company has a broad nationwide network with representatives supporting contractors, dealers supporting municipalities and eight rental facilities supporting short- and long-term rentals, parts, and service.

EFFICIENT AND PROGRESSIVE

Innovation is at the forefront of everything Super Products does. All units are engineered for a variety of applications and designed with the operator in mind while being recognized for high quality, durability, and ease of operation. Super Products gives you access to the industry's most efficient and progressive vacuum excavators, combination sewer cleaners, industrial vacuum loaders, truck-mounted jetters, and liquid vacuum trucks on the market today.

Mud Dog® Vacuum Excavators are designed to meet the challenges of compact, urban projects to large-scale excavation. In North America, a utility line

is hit every 6 minutes causing power and utility disruption, injuries, or death. Digging safer and smarter means utilizing vacuum excavation. Due to the precision and non-destructive nature of using compressed air or pressurized water, underground utilities can be uncovered safely.

Camel® Max Series Combination Sewer Cleaners are the most versatile combo units in the industry allowing operators to tackle a variety of applications with jetting, vacuuming, and excavating. Whether addressing emergency situations or performing maintenance, municipalities and contractors depend on reliable and efficient equipment to get the job done.

Supersucker® Industrial Vacuum Loaders offer an ideal and safe solution for waste removal and bulk material recovery. Using high-power airflow to suck up debris, the Supersucker will leave your jobsite spotless.

SuperJet® Truck Mounted Jetters blast debris to clear blockages and maintain sewer lines with the industry's strongest and smoothest single piston water pump when vacuuming extraction is not required.

Durasucker® Liquid Vacuum Trucks are DOT certified to collect and transport

hazardous and nonhazardous liquid and semi liquid waste. For hazardous waste or oil spills, liquid vacuum trucks are essential to collect and store materials quickly to prevent contamination or entrance to local waterways.

DOWNTIME IS NOT AN OPTION

Super Products' staff is available around the clock to support your parts and service needs. Parts are stocked at each rental facility, as well as its Wisconsin distribution center, and can be shipped anywhere in the country for next-day delivery. Additionally, service centers at each rental facility are capable of maintenance, repairs, and full refurbishments on all makes and models of heavy-duty vacuum trucks, not just Super Products equipment. Whether it is a small job or a complex repair, Super Products is there to minimize downtime and get your truck back up and running.

PARTNER WITH SUPER PRODUCTS

When it comes to vacuum trucks, Super Products has the support network and products to keep your team running strong. Contact Super Products today for any of your vacuum truck needs. ■

Trinity Highway

Delivering Roadway Solutions for Almost 50 years

In 1973, Trinity manufactured and sold its first piece of galvanized guardrail.

Since then, Trinity Highway has become the preeminent manufacturer of guardrail, cable and steel longitudinal barriers, crash cushions, truck and trailer mounted attenuators, water-filled barricades, sign supports, flexible delineators, and other roadway products. The acquisitions of industry leading brands including

U.S., Canada, Mexico, and to more than 100 international markets.

SETTING THE STANDARD

Trinity Highway has set the standard in delivering roadway solutions for almost 50 years. Our unparalleled reputation for innovative highway products is achieved with manufacturing facilities strategically located across the United States and the

Yodock branded traffic control products that are made in the USA, and tested to FHWA requirements. The water-filled barricades can be accessorized to meet a variety of traffic control applications including vertical construction, airports, crowd control at events or recreational facilities, and perimeter security or emergency response for military and government agencies. Yodock products are offered for sale or rent through Trinity Highway Rentals. ■

TRINITY HIGHWAY IS COMMITTED TO PROVIDING SUPERIOR CUSTOMER SERVICE AND DELIVERING QUALITY PRODUCTS.

Energy Absorption, Safe-Hit®, and Yodock® enable Trinity Highway to offer a broad range of products tested to and eligible for reimbursement under established federal crash test standards. Our products are sold throughout the

ability to custom manufacture products or quickly adapt to changes in the industry.

Yodock Wall Company, one of several Trinity brands, pioneered the water-filled barricade industry nearly 30 years ago. Trinity Highway continues to offer

INTRODUCING TRINITY HIGHWAY'S NEXT GENERATION WORK ZONE BARRIER

The HighwayGuard™ Barrier is a portable, longitudinal redirecting steel barrier made of lightweight, galvanized steel segments tested to MASH 16 Test Level 3 and Test Level 4. It is designed to help reduce work zone congestion in high traffic areas by creating temporary lane shifts and work zone closures during off-peak or weekend hours. The HighwayGuard™ Barrier can be used in work zone applications with other compatible end treatments such as the QuadGuard®. It is deployable in either single 20' segments or dual 40' segments.

Why Choose the HighwayGuard™ Barrier?

Quick Installation

Symmetrical barrier sections with universal T-connectors allow for any section to connect to one another in either direction, significantly lowering installation time, operational costs, and reducing inventory.

Simplified Design

Integrated anchoring and limited componentry. Multiple lifting points and grab options for minimized labor and enhanced safety.

Low Deflection

Standard or lowest deflection systems available for applications where space is limited.

Narrow Profile

Narrow barrier profile allows up to 827 linear feet to be transported on a single truckload.

Alpine

For more than 50 years, Alpine has been a trusted supplier of equipment for the construction, underground, and environmental sectors. Alpine specializes in hydraulic drum cutter attachments with its premier ROCKWHEEL product line, allowing for rapid and precise removal of rock and concrete, and filling the niche between bucket excavation and heavy hammers. These robust tools are extremely versatile. Use them for trenching, demolition, tunneling, mining, rock or concrete profiling, and for quarry production work. Nothing cuts rock or concrete with the precision of a Rockwheel. They are also suitable for underwater use. The Rockwheel is available for excavators and carriers of all sizes. No case drain line required!

Alpine Rockwheels have special motor protection valves not offered by others on the market.

MATERIAL PROCESSING

Complement the ROCKWHEEL tools with the ROCKCRUSHER and ROCKSCREENER buckets, formerly branded Hartl, for on-site material processing. The jaw plates on our Rockcrusher crusher bucket uses the unique Quattro Movement to create cubical shaped material for optimum compaction. The Reverse function allows the operator to efficiently remove jammed material without getting out of the cab. Output sizes range from 0.5 to 5.0 inches. The Rockcrusher is available with optional Water Spray Bars for dust control and Magnet attachments for sorting crushed material.

SOIL MIXING

Alpine also offers the most comprehensive line of excavator mounted SOIL MIXING attachments for soil remediation, stabilization, and solidification activities. Save time and money with in-situ remediation. Equipment options such as extension booms, injection piping, and depth control are available and customizable for your project.

SOLUTION PROVIDER

Alpine's experienced team will always strive to identify the optimum solution for your project, and is always available for technical support, service, and parts. All Alpine products are available on a rental basis with purchase option. Reach out to us at 814.466.7134 or at info@alpinecutters.com. ■

B2W Software

New Employee App

B2W Software has expanded its ONE Platform with a new mobile application for reporting labor hours, productivity, equipment utilization, and other data for individual employees working independently.

B2W EMPLOYEE APP

The B2W Employee App is an easy-to-use solution for recording this information on individual work logs. The data from work logs can be combined with similar data for crew-based employees collected with B2W Track electronic field logs. The unified approach gives contractors comprehensive reporting on project status as work is being performed

and it streamlines data transfer for payroll processing.

"A lot of contractors have approached us about the challenge of tracking equipment operators, truck drivers, and other employees that work independent of crews and supervisors on jobsites," explains B2W Software founder and CEO Paul McKeon. "We responded with a mobile solution."

Individuals use the B2W Employee App on iOS or Android mobile devices to record hours along with the associated projects and tracking accounts. Employees can also enter hours for equipment used and production quantities for work performed. Notes

can be added to the work logs and configurable fields can be created to meet business-specific requirements like recording weather conditions, safety compliance, or other information.

BUILT-IN WORKFLOW

The B2W Employee App includes a built-in workflow for electronic employee sign-off, submittal, and validation. Employees can use the app in a real-time, online mode. They can also create and modify work logs offline and send them to a server when a connection is established. ■

Dominion Equipment Parts

Established February 1998, family owned and operated Dominion Equipment Parts, LLC has been in business for more than 20 years. In just two decades, Dominion has become the OEM provider for Yanmar and Morooka equipment parts, developed its own brand of high-quality rubber track replacements, and is one of the nation's leading track importers, supplying rubber tracks for 38 crawler equipment brands.

Dominion is also a distributor of undercarriage parts for top brand names including Bobcat, Caterpillar, Gehl, Kubota, Takeuchi, and Mustang, providing sprockets, rollers, and idlers. It is the solely authorized North American distributor of specialized, compact dumpers and concrete trucks

manufactured by Fiori. Its geographic range includes the 48 contiguous United States, Canada, Mexico, and South and Central America.

Dominion initially shipped nationwide from Richmond, Virginia, its original base of operations. To improve delivery times, Dominion established distribution hubs in Dallas and Cincinnati, then added Jacksonville, Sacramento, Albany, and Portland. In 2015, it added a Canadian hub in Leduc, Alberta. Each was chosen for its logistical efficiency to give the region's customers same-day shipping with next-day delivery. Customers who choose to can also pick up their tracks or parts right from a regional warehouse, since each distribution hub also has a dedicated sales staff.

One of Dominion's greatest assets is a strong dealer network offering Dominion Rubber Tracks and associated parts, including Yanmar and Morooka. The network includes United Rentals, the largest rental agency on the continent with more than 960 locations.

Going forward, Dominion is focusing on improving its inventory and distribution capabilities even further, as well as supporting the Fiori Group machines it introduced in 2016. The compact, user-friendly vehicles increase productivity, flexibility, and operator safety in confined spaces such as narrow lanes, alleys, and tunnels. They are ideal for working in crowded city centers or in environmentally sensitive habitats and valued landscapes with restricted access. ■

InSite Software

InSite Elevation Pro is an easy-to-use earthwork take-off and GPS modeling solution for busy earthwork estimators. We help businesses of all sizes save time and earn more on commercial, residential, and landscaping projects.

Quickly and accurately calculate cut and fill, stripping, strata quantities, paving and concrete materials, topsoil re-spread, areas, lengths, trench excavation, and backfill. High quality graphics and easy-to-read reports provide hard graphic evidence of all calculations. InSite also gives you the tools to create GPS machine control and staking files without the complexity of a CAD program. The built in CAD viewer allows for easy import and export of CAD files.

Whether you need to value engineer a jobsite, provide detail reports, or provide 3D graphic images, we've got you've covered.

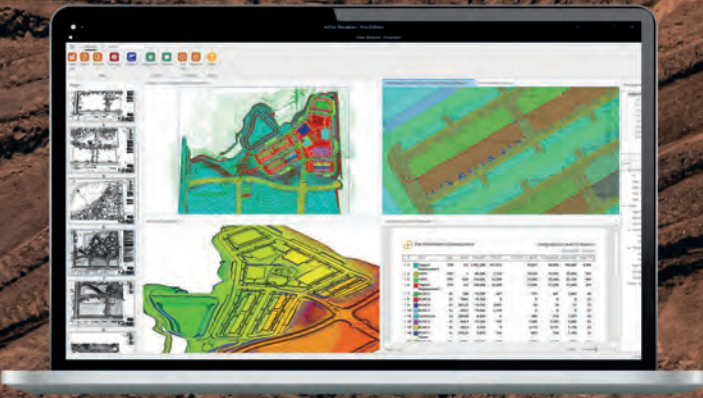

We understand you're busy and don't have time to waste. We provide 1:1 onboard training with purchase to get you up and running quickly. Support is 7 days a week, so you never miss a deadline. ■

"You have 'knocked it out of the park' with InSite Elevation Pro. I cannot say enough good things about the software. The speed in which the contours, subgrades, etc. can be entered saves a major amount of time."

Jeffrey Machine Inc.

Jeffrey Machine is one of the world's leading manufacturers of foundation and utility drilling tools. Founded in 1977 in Birmingham, Alabama, by brothers Frank and Hugh "Boodle" Sager, the company continues to operate under its founding philosophy, exceptional customer service, and superior quality products. Today, Jeffrey Machine delivers expertly engineered and dependable augers, flighting, and tools throughout North America and the surrounding regions.

BUILDING & REPAIRING

Jeffrey Sager began working with augers in 1984, first repairing them and later rebuilding them. In addition to their tool and die projects, local contractors began

to seek out Jeffrey Machine's services to repair augers and other equipment. This shift marked the beginning of Jeffrey Machine as we know it today.

"Our customers and employees are the key to our success," says Jeffrey. "We would not have experienced the growth and longevity over these last 45 years if it weren't for the long-lasting relationships we have developed with our customers, and the amazing team here at the shop."

EXPANSION

Jeffrey Machine is one of the world's largest independently owned auger manufacturers. The company continued to expand its footprint as demand for their products and services grew. This includes a 20,000 square foot expansion

in 2001, a second expansion in 2007, and a brand-new inventory/shipping facility in 2021. The Jeffrey Machine Headquarters is now over 150,000 square feet. Also, a satellite location was added in Euless, Texas, in 2017 to better serve the US West Coast.

In 2019, Gabby Sager officially came on board as the third generation of the Sager family to work at Jeffrey Machine.

45-YEAR MILESTONE

As they celebrate a 45-year milestone, Jeffrey Machine is focused on the future while holding on to the philosophy—excellent service, excellent employees, and excellent products. ■

Lind Equipment

Lind Equipment is a world leading manufacturer of portable LED lighting, hazardous location and industrial work lighting, portable power, static grounding, UV-C light, and GFCI products. With more than 70 years of experience providing products for industrial and hazardous locations, Lind Equipment is trusted on some of the toughest jobsites in the world.

BEACON LED TOWER

The 7-time award-winning Beacon LED Tower light has been pivotal in the world of temporary portable LED lighting. Lind Equipment launched the original Beacon LED Tower in 2017 and since then, they have created a 3-in-1 asset allowing this tower to work as a full-

brightness generator powered tower, a full-brightness electric powered tower and as a no-glare diffused light tower. This innovation in light towers has never been seen before, an ideal unit suited for virtually any application. Along side we have the heavy-duty, maintenance-free, Beacon978 LED Light Cart that is the most competitive light cart on the market today. Each LED light head boasts 22,500 lumens of bright white light while only drawing 150W of power. These light heads were derived from the 7-time award-winning Beacon LED Tower light and constructed with the same cast aluminum housing and polycarbonate lenses. The LED lights themselves instantly start-up at full output and are rated for 50,000 hours of 24/7 use while also cool to the touch.

LIND APOLLO UV-C LED LIGHT

During the global pandemic, Lind Equipment became aware of the dire need for a virus and bacteria disinfecting solution. As an innovation award-winning company, they did what they do best, create and innovate. Lind produced a brand-new decontamination product within the first months of the COVID-19 pandemic, the Lind Apollo UV-C LED light. This affordable and easy-to-use solution had a high need in the market and it soon became a much sought-after solution. The Lind Apollo light has since won 2 awards for its outstanding achievement during this unprecedented time. ■

Morooka USA

Rotating Dump Carriers

Morooka USA, the exclusive distributor of Morooka rubber track carriers in the U.S. and Canada, has announced that the MST-4000VDR, its largest dump carrier with a rotating upper structure, will be available later this year. Many attendees of the 2020 CONEXPO will remember that the prototype of this rotator-type rubber track carrier was on display in the Morooka booth. However, supply chain problems delayed the introduction of the MST-4000VDR to the North American market until this year. Morooka also recently launched the MST-3000VDR-LC rotator-type rubber track carrier.

The MST-4000VDR combines the utility of North America's top-selling

rubber track carrier model with an upper structure that rotates a full 360 degrees, allowing the operator to deliver a load and return without spinning the undercarriage. This feature makes possible easy-in/easy-out maneuvering in tight spaces even when carrying a maximum load. It also provides on-target side-dump accuracy, allowing an operator to deposit spoil exactly where it is needed.

David Byrd, Morooka USA vice president of marketing, says that the company debuted the new MST-3000VDR-LC rubber track carrier in 2021. This rotator-type carrier has an additional set of rollers for improved stability while dumping. "The long carrier was built

for customers who may be working on slopes or uneven terrain," says Byrd. "The extra set of rollers ensure the machine doesn't budge while dumping, no matter the angle." ■

Morooka USA is the exclusive distributor of Morooka rubber track carriers for North and South America, and manufactures several models in their Ashland, Virginia, USA facility. Morooka USA distributes Morooka rubber track carriers through a network of local dealers.

To find your dealer, go to www.morookacarriers.com, or call 877.667.6652.

National Construction Rentals

National Construction Rentals understands the relationships we build are just as important as the quality of work we put into each project. It's with this principle in mind that has made us become the largest supplier of Rent-A-Fence, barricades, portable toilets, hand wash stations, luxury restrooms, mobile storage containers, and temporary power in the nation.

For 60 years, National Construction Rentals has worked with every leading construction company, supplying temporary site service solutions to: Bechtel, Fluor, Kiewit, Turner, PCL Construction, The Shaw Group, Skanska USA, Clark Group, Jacobs, Foster Wheeler AG, The Walsh Group, Balfour Beatty, Whiting-Turner, Tutor Perini Corp., CB&I, Gilbane, Hansel Phelps, Mortenson Construction, McCarthy Construction, and countless others.

From commercial and residential construction, to government projects, public works, and emergency response, National's team of experienced professionals dedicate themselves to each project until each customer is satisfied with the results. This was our goal when we started in 1962. This is what continues to define who we are today. ■

For unparalleled service and superior customer support, contact us today at 800.352.5675 for the best in chain link fence, pedestrian barricades, portable toilets, hand wash stations, luxury restrooms, mobile storage containers, and temporary power solutions.

Product availability varies by region.

Poseidon Barge, LTD

Poseidon Barge, LTD specializes in manufacturing Sectional Barges used in the heavy construction industry to float equipment, men, or materials. Their Sectional Barges are manufactured in Berne, Indiana, and are transported via truck. They are used primarily on inland waterways where traditional deck barges cannot travel.

HULL SIZES TO FIT YOUR NEEDS

Poseidon manufactures barges with hull sizes of 4, 5, 7, and 10 ft tall. The Poseidon P10 is the largest Sectional Barge available that can be transported over the road. Measuring 44 ft long x 11 ft wide and 10 ft tall, the P10 has floated some of the largest cranes available. All Poseidon Barges have patented roll form decks that are rated for 20,000 lb/ft² of point load. That is four times the strength of traditional ¼-inch deck plate.

PRODUCT LINE ACCESSORIES

Accessories for each specific product line are also available. Spuds, spud wells, deck cleats, rake sections, hydraulic double drum winches, Sea Bee Thruster units, and Push Boats are all part of the product line available for rent or purchase.

Poseidon Barge, LTD has a full engineer staff led by an in-house certified Naval Architect. Layouts and Basic Stability Analysis are available for each project based on the information provided by the client.

Poseidon has recently added in-house steel grit blasting and liquid spray-painting booths to better serve its customers with a premier product finish. Large enough to accommodate the P10 barge, they are some of the largest booths in the Midwestern United States. Each booth is equipped with a 25-ton crane for easy product handling.

WITH A FOCUS ON QUALITY, INNOVATION, AND EXCELLENT CUSTOMER SERVICE, POSEIDON BARGE CONTINUES TO SET THE BAR HIGH FOR SUPERIOR PERFORMING SECTIONAL BARGES.

DESIGN SERVICES AVAILABLE

Poseidon performs contract manufacturing and finishing for markets outside of the marine industry. We also can offer design services through our engineering department.

Poseidon Barge, LTD is the only Sectional Barge Manufacturer that has received their ISO 9001:2015 certification. High quality, repeatability, and focused on

continual improvement separates Poseidon Barge, LTD from other manufacturers.

Poseidon Barge prides itself on the principle that the customer is assured that each and every barge section was built with the attention focused on these core values. ■

Sunflower Boat & Barge

Sunflower Enterprises is the mid-west's provider of marine construction equipment. Located in the tri-state region, Sunflower has a robust inventory of:

- Truckable Sectional Barges
- Crane and Spud Barges
- Truckable Tugboats
- Traditional Tugboats
- Dredges
- Two Drydocks

Sunflower Enterprises offers full service marine rentals to support:

- Drilling and Dredging
- Bridge Repairs
- Riprap Operations

SUNFLOWER'S
BARGES CAN BE
ASSEMBLED INTO ANY
PLATFORM SHAPE TO
SUPPORT CRANE OR
EXCAVATOR WORK.

Sunflower Enterprises drydocks routinely accommodate USCG and USACE tugboats and barges for repair work. Sunflower has repowered four vessels in the last 2 years on its drydocks and supported over a dozen drilling jobs.

We can support your drilling jobs with sectional barges of the following draft: 3 ft, 4 ft, 5 ft, and 7 ft. Shallow water or heavy loads is not a problem; a drilling platform of five 5 ft barges can support 150,000 lbs and draft only 2.3 ft. We have several truckable tugboats in stock with horsepower ranging from 300 hp to 600 hp. We offer support staff for drilling operations. Our experienced crew will mob/demob, assemble the equipment, and run the tugboat for you.

For more information, questions, or to discuss your upcoming projects, you can reach Sunflower Boat & Barge at 563.583.0556, or visit www.sunflowerboatandbarge.com.

Available for Lease:

- Sectional Barges
- Spud Barges from 75x32 to 195x70
- Hydraulic Dredges
- Truckable Tugboats from 300 – 600 hp
- Traditional Tugboats
- Support Equipment

Yokohama Off-Highway Tires

The Right Tool For Any Challenge

Yokohama Off-Highway Tires manufactures Yokohama OTR, Alliance, Galaxy and Primex tires, providing today's contractors with one of the largest lineups of construction tires in the world. Now, more than ever, those choices are vital to profitability.

"In today's construction industry, where labor is tight, costs are climbing, and every minute counts, the right tire can make a major contribution to the bottom line," says Bruce Besancon, vice president—marketing for Yokohama Off-Highway Tires America, Inc.

ALL-STAR TEAM

"We pride ourselves on the versatility and durability of our tires, and we also encourage contractors to zero in on specific features that can really increase their productivity," Besancon notes. Yokohama Off-Highway Tires is rooted in a century of leadership in tire technology.

"In tires, we help customers look at the environments they're working in to help find the tread pattern and compound that will help them get the best performance and longest life," Besancon explains. "We also look at how much distance a piece of machinery covers. Is a backhoe loader turning around from a pile of gravel to load a dump truck a few yards away, or is it running down the road from site to site during a shift? Travel distance can make a huge difference when it comes to heat buildup, which is extremely destructive to tires.

"Spending some time thinking about the conditions your tires face and talking to your tire dealer about the compounds, tire construction, and design technologies that are available now can turn your tires into a great investment," he adds.

COST PER HOUR

The right tire can boost equipment performance by transmitting more horsepower to the ground, minimizing slip, reducing wear and tear on the machine, and increasing speed. A smooth-riding tire can also improve operator comfort, which has been demonstrated to increase productivity.

Just as important, a tire with long service life and a reasonable purchase cost can directly improve a construction company's profitability, Besancon points out. ■

WHEN THINGS GET TOUGH... **NOTHING BEATS THE RIGHT TOOLS**

With the Yokohama OTR, Alliance, Galaxy and Primex brands under one umbrella, Yokohama Off-Highway Tires America, Inc. delivers the tools you need to stay profitable—tires purpose-built to help you tackle just about any challenge on any job site. Every one of our tires is built to deliver higher productivity and lower cost per hour.

YOKOHAMA RL45

The Yokohama RL45 features a deep tread and sturdy construction for longer, better wear on the roughest of surfaces.

Ask your tire dealer about Yokohama OTR, Alliance, Galaxy and Primex construction tires, visit yokohama-oht.com or call (800) 343-3276.

BedLock Safety Products, LLC

BedLock Safety Products, LLC announces a positive improvement to the already tested and proven BedLock safety support system. Its effective and successful chain-and-key-slot attachment system—as proven by the thousands of pairs in use today—is now even more versatile. We are thrilled to announce that our safety support system will now be sold with two hooked chains per brace, offering you maximum versatility in securing the BedLock braces to the truck frame. Our patented system and method of use is secured twice.

BedLock Safety Products, LLC, in keeping with our commitment to offer only the finest and safest products to the truck repair industry, is proud to reintroduce the BedLock safety support system with two hooked chains per brace, and new double key slot retention plate. This will be the standard offering on all sizes of our BedLock safety device systems.

We appreciate your support and look forward to making the truck repair industry a safer place to work. ■
